1.0. Introduction

The ACR1555U NFC Bluetooth® Reader is compliant to ISO 14443 Parts 1-4, ISO 18092 and supporting contactless cards, MIFARE® cards, FeliCa™ cards, ISO 7816 Class A, B, and C (5 V, 3 V and 1.8 V) SAM Cards and NFC tags etc.

The reader supports Bluetooth® Standard 5.2, single-mode operation. It is also a USB Type-C device and is compatible with various Operating Systems, such as iOS, Android™, Linux® and Windows® Platforms.

For power supply, the ACR1555U provides Li-ion batteries with 450mAh 3.7V. It also includes 3 LEDs and a buzzer to show the device's operation status, as well as 2 buttons to control both battery, device status and Bluetooth® status respectively.

1.1. Symbols and Abbreviations

| Abbreviation | Description |
|--------------|--|
| ATR | Attribute Request and Attribute Response |
| DEP | Data Exchange Protocol Request and Data Exchange Protocol Response |
| DSL | Deselect Request and Deselect Response |
| PSL | Parameter Selection Request and Parameter Selection Response |
| RLS | Release Request and Release Response |
| WUP | Wakeup Request and Wakeup Response |
| DID | Device ID |
| BS | Sending bit duration |
| BR | Receiving bit duration |
| PP | Protocol Parameters |

Table 1: Symbols and Abbreviations

2.0. Features

- USB Full Speed Interface
- Bluetooth Interface
- CCID-compliant
- Smart Card Reader:
 - Contactless Interface:
 - Read/Write speed of up to 26kbps ISO 15693 & 848 kbps (ISO 14443) card types
 - Built-in antenna for contactless tag access, with card reading distance of up to 50 mm (depending on tag type)
 - Supports ISO 15693 card types
 - Supports ISO 14443 Part 4 Type A and B cards, MIFARE® series, FeliCa, and all 5 types of NFC (ISO/IEC 18092) tags
 - Built-in anti-collision feature
 - Supports extended APDU (max. 64 KB)
 - SAM Interface:
 - One SAM Slot
 - Supports ISO 7816 Class A SAM cards
- Application Programming Interface:
 - Supports PC/SC
 - Supports CT-API (through wrapper on top of PC/SC)
- Built-in Peripherals:
 - Three user-controllable LEDs (Blue, Yellow and Red&Green Bi-colour LED)
 - User-controllable buzzer
 - Buttons to control both battery, device and Bluetooth® status
- USB Firmware Upgradability¹
- Supports Android™ 4.3 and later²
- Supports iOS and iPadOS 12 or above³
- Compliant with the following standards:
 - IEC/EN 62368
 - CE
 - UKCA
 - FCC
 - VCCI
 - RoHS
 - REACH
 - Bluetooth® BQB
 - TELEC (Japan)
 - Microsoft® WHQL
 - KCC (Korea)
 - ISO 14443
 - ISO 15693
 - ISO 7816

¹ Applicable under PC-linked mode

² Uses an ACS-defined Android Library

³ Uses an ACS-defined iOS or iPadOS Library

- PC/SC
- CCID
- WEEE

3.0.ACR1555U Architecture

3.1. Reader Block Diagram

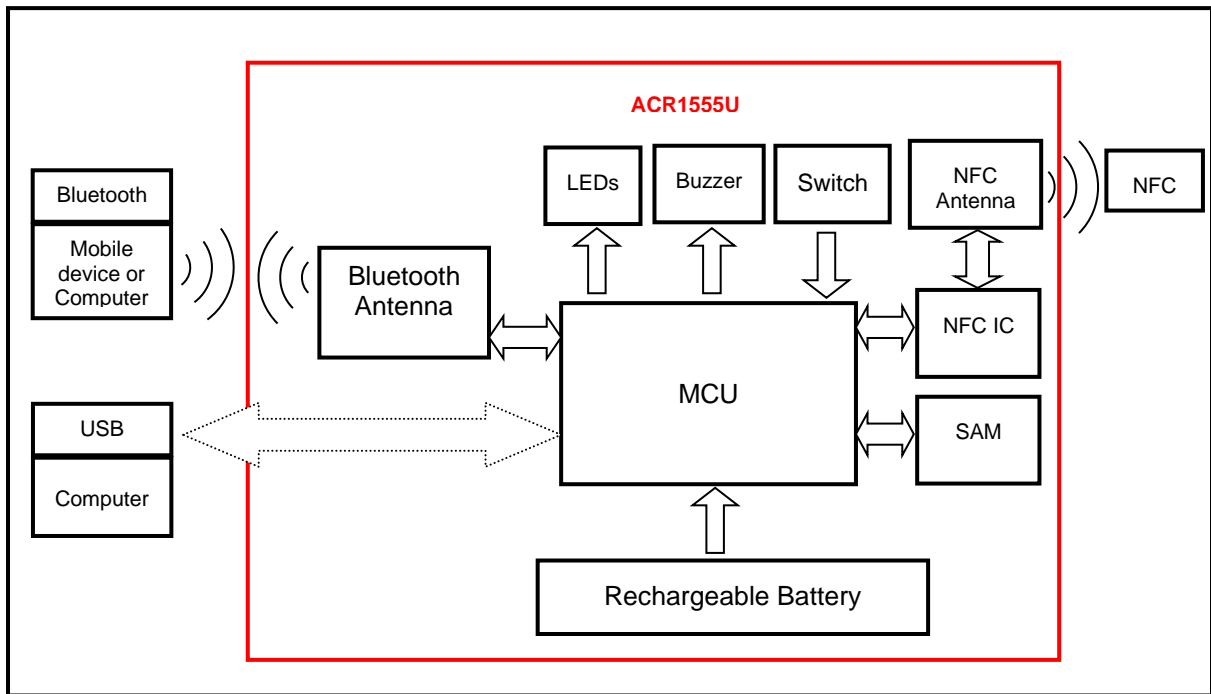

Figure 1: ACR1555U Reader Block Diagram

3.2. Communication between PC/SC driver and PICC and SAM

The protocol being used between the ACR1555U and the PC is CCID. All communications between PICC and SAM are PC/SC-compliant.

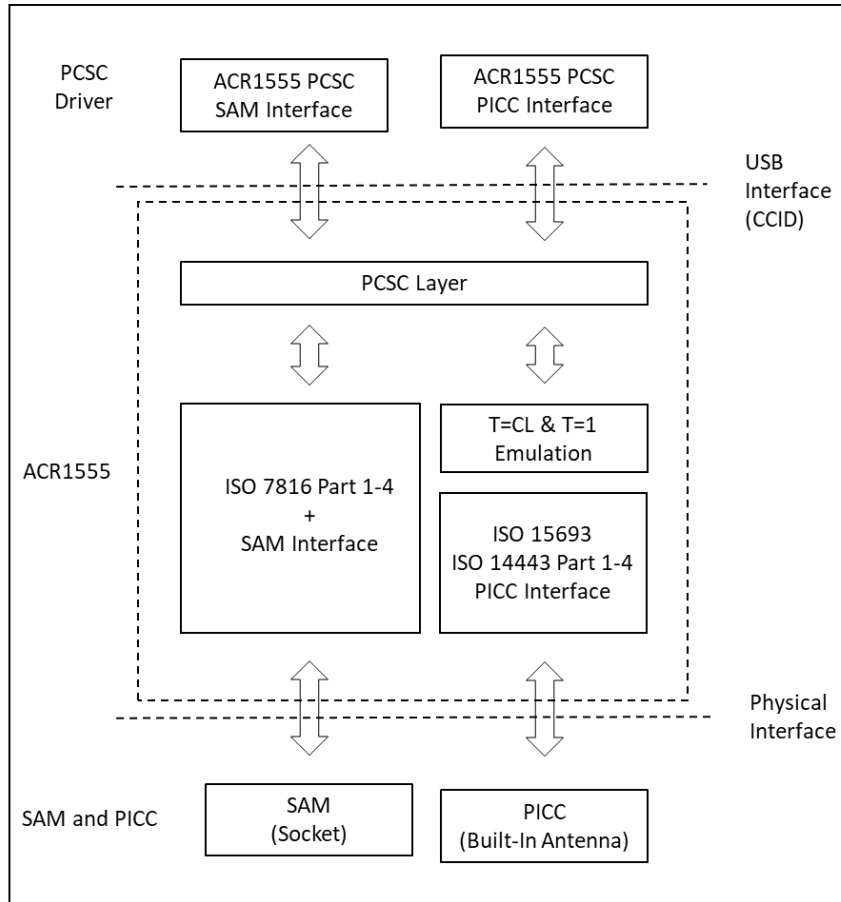

Figure 2: ACR1555U Architecture

Bluetooth low energy protocol stack architecture is show as follow:

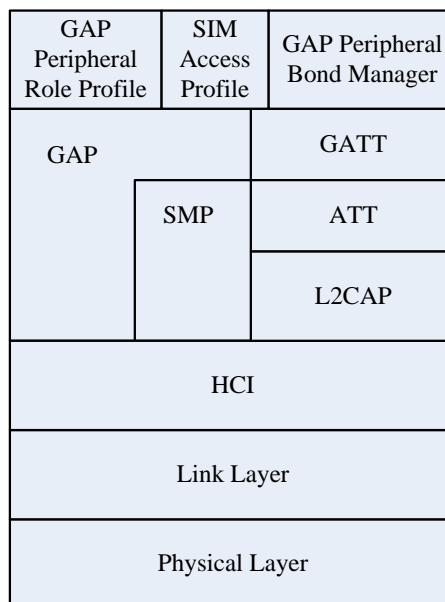

Figure 3: BLE Protocol Stack

4.0. Hardware Design

4.1. Battery

The ACR1555U uses a rechargeable Lithium-ion battery, which has a capacity of 450 mAh.

4.1.1. Battery Charging

Once the battery of the ACR1555U runs out, it may be charged in any of the following modes: OFF, USB, or Bluetooth, as long as it is connected to a power outlet.

4.1.2. Battery Life

The battery life is dependent on the usage of the device. Below is an estimate of the battery life depending on the various work conditions:

| Mode | Estimated Battery Life |
|--------------|---------------------------|
| Working Mode | 5.5 hours* ⁽¹⁾ |
| Standby Mode | 12 hours* ⁽²⁾ |
| OFF Mode | 48 days |

Table 2: Estimated Battery Lifespan

Note: Results may vary as it depends on the smart card used.

⁽¹⁾ In Bluetooth mode, Continuous operation when sleep mode is disabled.

⁽²⁾ In Bluetooth mode, set Sleep time as 60, wake up 10 operations per day, one minute per operation.

4.2. Bluetooth

The ACR1555U uses Bluetooth as the medium to pair the device with computers and mobile devices.

4.3. USB

The ACR1555U connects to a computer through USB following the USB standard.

4.3.1. Communication Parameters

The ACR1555U connects to a computer through USB as specified in the USB Specification 2.0. The ACR1555U works in full-speed mode, i.e. 12 Mbps.

| Pin | Signal | Function |
|-----|------------------|--|
| 1 | V _{BUS} | +5 V power supply for the reader |
| 2 | D- | Differential signal transmits data between ACR1555U and PC |
| 3 | D+ | Differential signal transmits data between ACR1555U and PC |
| 4 | GND | Reference voltage level for power supply |

Table 3: USB Interface Wiring

NOTE - In order for the ACR1555U to function properly through USB interface, either **ACS proprietary device driver** or **Microsoft CCID Driver** has to be installed. Please refer to the Device Driver Installation Guide for more detail.

4.3.2. Endpoints

The ACR1555U uses the following endpoints to communicate with the host computer:

Control Endpoint For setup and control purpose

PICC:

EP1 Bulk OUT For command to be sent from host to ACR1555U PICC interface (data packet size is 64 bytes)

EP1 Bulk IN For response to be sent from ACR1555U PICC interface to host (data packet size is 64 bytes)

EP2 Interrupt IN For card status message to be sent from ACR1555U PICC interface to host (data packet size is 8 bytes)

SAM:

EP3 Bulk OUT For command to be sent from host to ACR1555U SAM interface (data packet size is 64 bytes)

EP3 Bulk IN For response to be sent from ACR1555U SAM interface to host (data packet size is 64 bytes)

4.4. Contactless Smart Card Interface

The interface between the ACR1555U and the contactless card follows the specifications of ISO 14443 with certain restrictions or enhancements to increase the practical functionality of the ACR1555U.

4.4.1. Carrier Frequency

The carrier frequency for the ACR1555U is 13.56 MHz.

4.4.2. Card Polling

The ACR1555U automatically polls the contactless cards that are within the field. ISO 14443-4 Type A, ISO 14443-4 Type B, ISO 15693, FeliCa, Topaz, MIFARE series and NFC tags are supported.

4.5. User Interface

4.5.1. LED

The LEDs are used for showing the Bluetooth mode, power and USB mode status. **Blue LED** showing Bluetooth mode status, **Green LED** showing device's power status, **Red LED** showing Battery status, **Yellow LED** showing PICC status.

| Mode | Color | LED Activity | Status |
|----------------|-------------------------------|--------------------|--|
| Bluetooth Mode | Blue //(LED1) | Off | Reader is powered off No Bluetooth device paired Reader is in USB mode |
| | | Fast flash (4Hz) | Waiting User to confirm pairing(require to press Mode Button once) |
| | | Slow flash (0.5Hz) | Advertising Waiting for devices to be paired with |
| | | On | Bluetooth device is connected |
| | Red //(LED2) | Off | Battery is fully charged Reader is powered by USB only / The voltage of the battery is greater than 3.5 V and no USB powered is being supplied |
| | | Slow flash (0.2Hz) | Low battery (below 30% battery level) |
| | | On | Battery is charging |
| | Orange ⁴ (LED2) | On | Device is powered on and charging |
| | Green //(LED2) | Off | Device is powered off |
| | | On | Device is powered on |
| | Yellow //(LED3) | Off | RF Power off |
| | | Fast flash | There is reading/writing between the smart card and reader |
| | | On | Card is present and the reader is waiting for instruction |

Table 4: Bluetooth Mode LED Behaviour

⁴ Green and Red both turned on

| Mode | Color | LED Activity | Status |
|----------|-------------------------------|-----------------------|---|
| USB mode | Blue //(LED1) | Off | Reader is in USB mode |
| | Red //(LED2) | Off | Battery is fully charged Reader is powered by USB only / The voltage of the battery is greater than 3.5 V and no USB powered is being supplied |
| | | Slow flash (0.2Hz) | Low battery (below 30% battery level) |
| | | On | Battery is charging |
| | Orange ⁵ (LED2) | On | Device is powered on and charging |
| | Green (LED2) | Off | Device is powered off |
| | | On | Device is powered on |
| | Yellow //(LED3) | Off | No card presented, RF Power off |
| | Yellow //(LED3) | Fast flash | There is reading/writing between the smart card and reader |
| | | On | Card is present and the reader is waiting for instruction |
| | | Off | No card presented, RF Power off |

Table 5: USB Mode LED Behaviour

4.5.2. Buzzer

A buzzer is used to show the poll card, Bluetooth connect, sleep and low power event.

| Buzzer Activity | Event |
|-------------------|---|
| One beep | 1. Reader has been powered on 2. Card has been detected or removed 3. Switching from USB mode to BLE mode (LONG beep) |
| Two beeps | Reader powered and is low battery level |
| Three short beeps | Power off |

⁵ Green and Red both turned on

4.5.3. Key

ACR1555U have 2 button: BLE button and Power button.

| Key | Condition | Mode | Key Status | Describe |
|-----------|-------------------|-------------------|-------------|---------------------------|
| MODE KEY | - | BLE Mode (paring) | Short press | Confirm Bluetooth Bonding |
| | Plugged in PC USB | USB Mode | Long press | Switch to BLE mode |
| POWER KEY | Reader off | Any | Long press | Power ON / Activate NFC |
| | Reader on | | Long press | Power OFF |

5.0. Software Design

5.1. Reader's Mode selection

Figure 4: Reader Mode

When powered on, the reader will detect the connection of the USB port, if it detected 5V at the port, it will start the USB enumerate, if the process succeeds, the reader will stay in USB mode. If the process fail, the reader will start Advertising in Bluetooth Mode. To switch back from Bluetooth mode to USB mode, user need to switch off the device and power it up again, to re-enumerate the USB device.

5.2. Bluetooth Communication

5.2.1. Bluetooth Connection Flow

The program flow of the Bluetooth connection is shown below:

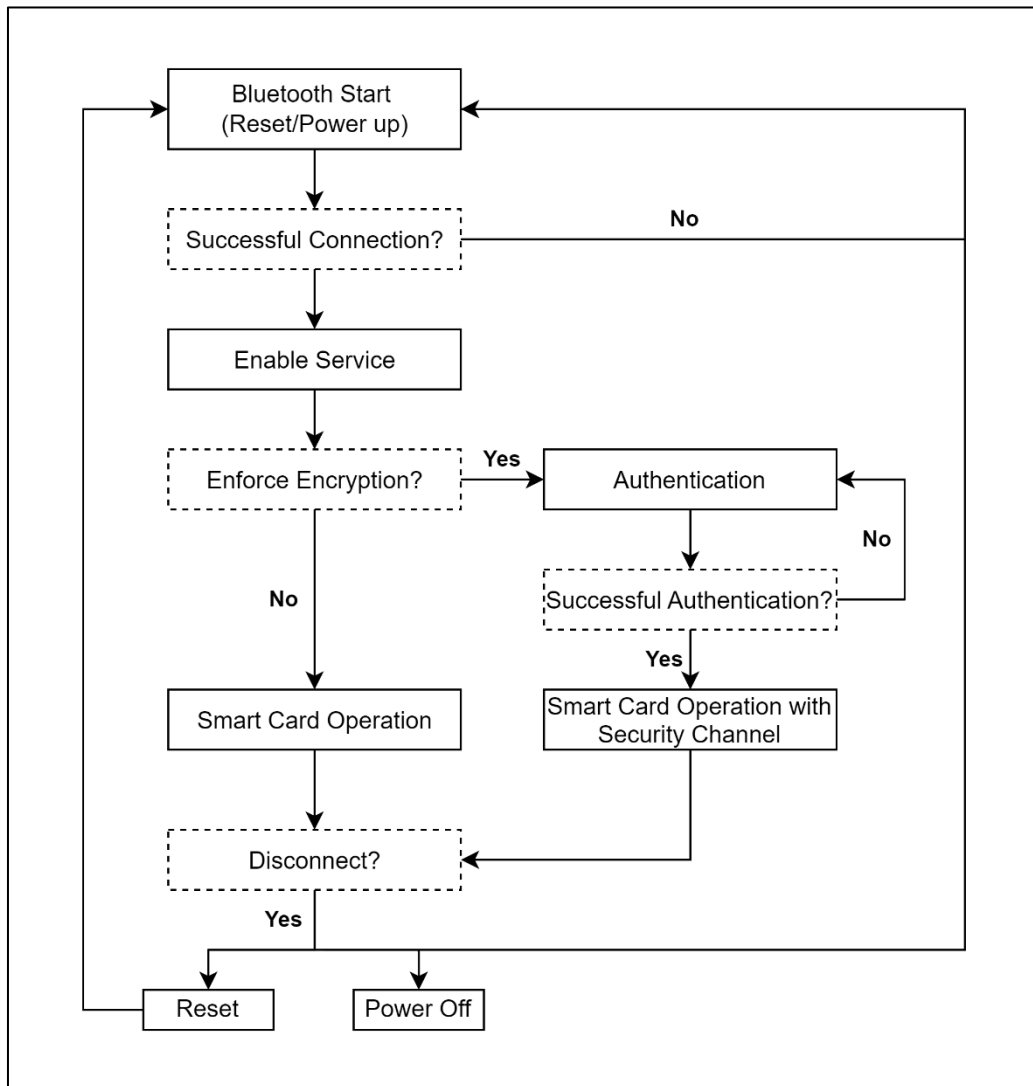

Figure 5: Bluetooth Connection Flow

5.2.2. Profile Selection

The ACR1555U is a smart card reader that is designed to use Bluetooth technology as an interface to transmit data. A customized service called Commands Communication with three pipes is used: the first pipe is used for command request, the second pipe is for command response, and the third pipe is for card notification.

Also, the reader's current power consumption is significantly greater when the reader is operating in Bluetooth mode, hence, a standard battery service is used to notify the paired device about the current battery status. When there is a change in the battery status, the reader will notify the paired device through a specific pipe. To simplify, the battery levels are divided into three groups: sufficient battery (≥ 3.78 V), low battery (< 3.78 V and ≥ 3.68 V), and no battery (< 3.68 V).

Finally, to provide more reader information to the user, a customized Device Information service is added. This can only be read manually, or by an application request. The characteristics include Model Number, Serial Number, Firmware Revision, and Manufacturer Name.

| Service | UUID | Pipe |
|--------------------|--------------------------------------|-------------------|
| Smart Card | 00003971-817C-48DF-8DB2-476A8134EDE0 | Commands Request |
| | 00003972-817C-48DF-8DB2-476A8134EDE0 | Commands Response |
| | 00003973-817C-48DF-8DB2-476A8134EDE0 | Card Notification |
| Battery | 2A19 | Battery Level |
| Device Information | 2A23 | System ID |
| | 2A24 | Model Number |
| | 2A25 | Serial Number |
| | 2A26 | Firmware Revision |
| | 2A27 | Hardware Revision |
| | 2A29 | Manufacturer Name |

Table 6: ACR1555U Bluetooth Service

| Attribute Name | UUID | Handle |
|---|--------------------------------------|--------|
| DeviceName | 2A00 | 06h |
| Send(Reader → Paired device) | 00003971-817C-48DF-8DB2-476A8134EDE0 | 28h |
| Receive(Paired device → Reader) | 00003972-817C-48DF-8DB2-476A8134EDE0 | 2Bh |
| Card Notification(Reader → Paired device) | 00003973-817C-48DF-8DB2-476A8134EDE0 | 2Fh |
| ABatteryLevel | 2A19 | 20h |
| Manufacturer | 2A29 | 19h |
| SerialNumber | 2A25 | 11h |
| FW_Version | 2A26 | 13h |
| ModelNumber | 2A24 | 0Fh |

Table 7: ACR1555U Service Handles and UUID Information List

5.2.3. Communication Profile

The communication profile should be:

Start byte + Slot + Len + Reserved (1 byte) + Datablock + Checksum + Stop byte

| Field | Size (bytes) | Description |
|------------------------|--------------|--|
| Start byte | 1 | Value: 55h |
| Slot | 1 | Slot 00h: PICC, Slot 01h SAM |
| Len | 2 | Len means the number of bytes in the Datablock field |
| Reserved | 1 | Reserved |
| Host Sequence Number | 1 | Increase by 1 for new frame send by host |
| Reader Sequence Number | 1 | Increase by 1 for new frame send by reader |
| Datablock | N | Data (Message Body follow CCID) |
| Checksum | 1 | XOR values of Slot, Len, Frame Type, Host & Reader Seq, Data Field |
| Stop byte | 1 | Value: AAh |

5.2.4. Bluetooth Communication Protocol

The ACR1555U communicates to the paired device using the Bluetooth interface with a predefined protocol. The protocol is similar to the formats of the CCID Command Pipe and Response Pipe.

| Command | Mode Supported | Sender | Description |
|---------|---------------------------|---------------|-----------------|
| 62h | Plain text, Authenticated | Paired device | PICC Power On |
| 63h | Plain text, Authenticated | Paired device | PICC Power Off |
| 65h | Plain text, Authenticated | Paired device | Get Card Status |
| 6Fh | Plain text, Authenticated | Paired device | Exchange APDU |
| 6Bh | Plain text, Authenticated | Paired device | Escape Commands |
| 61h | Plain text, Authenticated | Paired device | Set Parameters |

Table 8: Command Code Summary

| Command | Mode Supported | Sender | Description |
|---------|---------------------------|--------|----------------------------|
| 80h | Plain text, Authenticated | Reader | Response to Data Block |
| 81h | Plain text, Authenticated | Reader | Response to Slot Status |
| 82h | Plain text, Authenticated | Reader | Response to Parameters |
| 83h | Plain text, Authenticated | Reader | Response to Escape Command |
| 53h | Plain text, Authenticated | Reader | Response to Error |

Table 9: Response Code Summary

| Command | Mode Supported | Sender | Description |
|---------|---------------------------|--------|-------------------------|
| 50h | Plain text, Authenticated | Reader | Notify Card Status |
| 52h | Plain text, Authenticated | Reader | Notify Enter Sleep Mode |

Table 10: Card Notification Code Summary

5.2.4.1. PC_to_RDR_IccPowerOn

Activate the card slot and return ATR from the card.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-----------|---|
| 0 | bMessageType | 1 | 62h | - |
| 1 | dwLength | 4 | 00000000h | Size of extra bytes of this message |
| 2 | bSlot | 1 | 00-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 5 | bSeq | 1 | 00-FFh | Sequence number for command |
| 6 | bPowerSelect | 1 | 00h-02h | Voltage that is applied to the ICC 00h – Automatic Voltage Selection 01h – 5 volts 02h – 3 volts |
| 7 | abRFU | 2 | 0000h | Reserved for future use |

The response to this message is the RDR_to_PC_DataBlock message and the data returned is the Answer To Reset (ATR) data.

5.2.4.2. PC_to_RDR_IccPowerOff

Deactivate the card slot.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-----------|--|
| 0 | bMessageType | 1 | 63h | - |
| 1 | dwLength | 4 | 00000000h | Size of extra bytes of this message |
| 5 | bSlot | 1 | 00-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 6 | bSeq | 1 | 00-FFh | Sequence number for command |
| 7 | abRFU | 3 | 000000h | Reserved for future use |

The response to this message is the RDR_to_PC_SlotStatus message.

5.2.4.3. PC_to_RDR_GetSlotStatus

Get current status of the slot.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-----------|--|
| 0 | bMessageType | 1 | 65h | - |
| 1 | dwLength | 4 | 00000000h | Size of extra bytes of this message |
| 5 | bSlot | 1 | 00-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 6 | bSeq | 1 | 00-FFh | Sequence number for command |
| 7 | abRFU | 3 | 000000h | Reserved for future use |

The response to this message is the RDR_to_PC_SlotStatus message.

5.2.4.4. PC_to_RDR_XfrBlock

Transfer data block to the ICC.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|--------------------|---|
| 0 | bMessageType | 1 | 6Fh | - |
| 1 | dwLength | 4 | 00000000-000001E7h | Size of abData field of this message Fields are stored in little endian. |
| 5 | bSlot | 1 | 00-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 6 | bSeq | 1 | 00-FFh | Sequence number for command |
| 7 | bBWI | 1 | 00-FFh | Used to extend the CCIDs Block Waiting Timeout for this current transfer. The CCID will timeout the block after "this number multiplied by the Block Waiting Time" has expired. |

| Offset | Field | Size | Value | Description |
|--------|-----------------|------------|-------|---|
| 8 | wLevelParameter | 2 | - | Fields are stored in little endian. TPDU level, RFU, = 0000h Short APDU level, RFU, = 0000h Extended APDU level: indicates if APDU begins or ends in this command: 0000h the command APDU begins and ends with this command, 0001h the command APDU begins with this command, and continue in the next PC_to_RDR_XfrBlock, 0002h this abData field continues a command APDU and ends the APDU command, 0003h the abData field continues a command APDU and another block is to follow, 0010h empty abData field, continuation of response APDU is expected in the next RDR_to_PC_DataBlock. |
| 10 | abData | Byte array | - | Data block sent to the CCID. Data is sent "as is" to the ICC (TPDU exchange level) |

The response to this message is the RDR_to_PC_DataBlock message.

5.2.4.5. PC_to_RDR_Escape

Access extended features.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|--------------------|--|
| 0 | bMessageType | 1 | 6Bh | - |
| 1 | dwLength | 4 | 00000000-000000FFh | Size of abData field of this message. Fields are stored in little endian. |
| 5 | bSlot | 1 | 00h-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 6 | bSeq | 1 | 00-FFh | Sequence number for command |
| 7 | abRFU | 3 | 000000h | Reserved for Future Use |

| | | | | |
|----|--------|------------|---|-----------------------------|
| 10 | abData | Byte array | - | data block sent to the CCID |
|----|--------|------------|---|-----------------------------|

The response to this command message is the RDR_to_PC_Escape response message

5.2.4.6. PC_to_RDR_SetParameters

Set slot parameters.

| Offset | Field | Size | Value | Description |
|--------|-------------------------|------------|------------------------------|--|
| 0 | bMessageType | 1 | 61h | - |
| 1 | dwLength | 4 | 00000005h or 00000007h | Size of abProtocolDataStructure field of this message. Fields are stored in little endian. |
| 5 | bSlot | 1 | 00-01h | Identifies the slot number for this command 00h: PICC 01h: SAM |
| 6 | bSeq | 1 | 00-FFh | Sequence number for command |
| 7 | bProtocolNum | 1 | 00-01h | Specifies what protocol data structure follows. 00h = Structure for protocol T=0 01h = Structure for protocol T=1 The following values are reserved for future use. 80h = Structure for 2-wire protocol 81h = Structure for 3-wire protocol 82h = Structure for I2C protocol |
| 8 | abRFU | 2 | 0000h | Reserved for future use |
| 10 | abProtocolDataStructure | Byte array | - | Protocol Data Structure |

Protocol Data Structure for Protocol T=0 (dwLength=00000005h)

| Offset | Field | Size | Value | Description |
|--------|----------------|------|-------------|---|
| 10 | bmFindexDindex | 1 | | B7-4 – FI – Index into the table 7 in ISO/IEC 7816-3:1997 selecting a clock rate conversion factor B3-0 – DI - Index into the table 8 in ISO/IEC 7816-3:1997 selecting a baud rate conversion factor |
| 11 | bmTCCKST0 | 1 | 00h, 02h | B0 – 0b, B7-2 – 000000b B1 – Convention used (b1=0 for direct, b1=1 for inverse) Note: The CCID ignores this bit. |
| 12 | bGuardTimeT0 | 1 | 00-FFh | Extra Guardtime between two characters. Add 0 to 254 etu to the normal guardtime of 12etu. FFh is the same as 00h. |

| | | | | |
|----|-------------------|---|--------|--|
| 13 | bWaitingIntegerT0 | 1 | 00-FFh | WI for T=0 used to define WWT |
| 14 | bClockStop | 1 | 00-03h | ICC Clock Stop Support 00h = Stopping the Clock is not allowed 01h = Stop with Clock signal Low 02h = Stop with Clock signal High 03h = Stop with Clock either High or Low |

Protocol Data Structure for Protocol T=1 (dwLength=00000007h)

| Offset | Field | Size | Value | Description |
|--------|-------------------|------|--------------------|---|
| 10 | bmFindexDindex | 1 | | B7-4 – FI – Index into the table 7 in ISO/IEC 7816-3:1997 selecting a clock rate conversion factor B3-0 – DI - Index into the table 8 in ISO/IEC 7816-3:1997 selecting a baud rate conversion factor |
| 11 | BmTCKKST1 | 1 | 10h, 11h, 12h, 13h | B7-2 – 000100b B0 – Checksum type (b0=0 for LRC, b0=1 for CRC) B1 – Convention used (b1=0 for direct, b1=1 for inverse) Note: The CCID ignores this bit. |
| 12 | BGuardTimeT1 | 1 | 00-FFh | Extra Guardtime (0 to 254 etu between two characters). If value is FFh, then guardtime is reduced by 1 etu. |
| 13 | BwaitingIntegerT1 | 1 | 00-9Fh | B7-4 = BWI values 0-9 valid B3-0 = CWI values 0-Fh valid |
| 14 | bClockStop | 1 | 00-03h | ICC Clock Stop Support 00h = Stopping the Clock is not allowed 01h = Stop with Clock signal Low 02h = Stop with Clock signal High 03h = Stop with Clock either High or Low |
| 15 | bIFSC | 1 | 00-FEh | Size of negotiated IFSC |
| 16 | bNadValue | 1 | 00h | Only support NAD = 00h |

The response to this message is the RDR_to_PC_Parameters message

5.2.4.7. RDR_to_PC_DataBlock

This message is sent by ACR1555U in response to PC_to_RDR_IccPowerOn and PC_to_RDR_XfrBlock messages.

| Offset | Field | Size | Value | Description |
|--------|-----------------|------------|--------------------|--|
| 0 | bMessageType | 1 | 80h | Indicates that a data block is being sent from the CCID |
| 1 | dwLength | 4 | 00000000-000001E7h | Size of abData field of this message. Fields are stored in little endian. |
| 5 | bSlot | 1 | - | Same value as in Bulk-OUT message |
| 6 | bSeq | 1 | - | Same value as in Bulk-OUT message |
| 7 | bStatus | 1 | - | Slot status register as defined in <u>Appendix B</u> |
| 8 | bError | 1 | - | Slot error register as defined in <u>Appendix B</u> |
| 9 | bChainParameter | 1 | - | Short APDU level, RFU = 00h Extended APDU level: 00h – the response APDU begins and ends in this command. 01h – the response APDU begins with this command, and is to continue. 02h – this abData field continues the response APDU and ends the response APDU. 03h – this abData field continues the response APDU and another block is to follow. 10h – empty abData field, continuation of command APDU is expected in the next PC_to_RDR_XfrBlock command. |
| 10 | abData | Byte array | - | This field contains the data returned by the CCID |

5.2.4.8. RDR_to_PC_SlotStatus

This message is sent by ACR1555U in response to PC_to_RDR_IccPowerOff, and PC_to_RDR_GetSlotStatus.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-----------|--|
| 0 | bMessageType | 1 | 81h | - |
| 1 | dwLength | 4 | 00000000h | Size of extra bytes of this message |
| 5 | bSlot | 1 | - | Same value as in Bulk-OUT message |
| 6 | bSeq | 1 | - | Same value as in Bulk-OUT message |
| 7 | bStatus | 1 | - | Slot status register as defined in Appendix B |
| 8 | bError | 1 | - | Slot error register as defined in Appendix B |
| 9 | bClockStatus | 1 | 00-03h | Value = 00h Clock running 01h Clock stopped in state L 02h Clock stopped in state H 03h Clock stopped in an unknown state All other values are RFU. |

5.2.4.9. RDR_to_PC_Parameters

This message is sent by ACR1555U in response to PC_to_RDR_GetParameters, PC_to_RDR_ResetParameters and PC_to_RDR_SetParameters messages.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|------------------------------|---|
| 0 | bMessageType | 1 | 82h | - |
| 1 | dwLength | 4 | 00000005h or 00000007h | Size of abProtocolDataStructure field of this message. Fields are stored in little endian. |
| 5 | bSlot | 1 | - | Same value as in Bulk-OUT message |
| 6 | bSeq | 1 | - | Same value as in Bulk-OUT message |
| 7 | bStatus | 1 | - | Slot status register as defined in Appendix B |
| 8 | bError | 1 | - | Slot error register as defined in Appendix B |
| 9 | bProtocolNum | 1 | 00-01h | Specifies what protocol data structure follows. 00h = Structure for protocol T=0 01h = Structure for protocol T=1 |

| | | | | |
|----|-------------------------|------------|---|---|
| | | | | The following values are reserved for future use. 80h = Structure for 2-wire protocol 81h = Structure for 3-wire protocol 82h = Structure for I2C protocol |
| 10 | abProtocolDataStructure | Byte array | - | Protocol Data Structure as summarized in 5.2.4.6 . |

5.2.4.10. RDR_to_PC_Escape

This message is sent by ACR1555U in response to PC_to_RDR_Escape messages

| Offset | Field | Size | Value | Description |
|--------|-----------------|------------|--------------------|---|
| 0 | bMessageType | 1 | 83h | - |
| 1 | dwLength | 4 | 00000000-000000FFh | Size of abData field of this message. Fields are stored in little endian. |
| 5 | bSlot | 1 | - | Same value as in Bulk-OUT message |
| 6 | bSeq | 1 | - | Same value as in Bulk-OUT message |
| 7 | bStatus | 1 | - | Slot status register as defined in Appendix B |
| 8 | bError | 1 | - | Slot error register as defined in Appendix B |
| 9 | bChainParameter | 1 | 00h | RFU |
| 10 | abData | Byte array | - | Data send from CCID |

5.2.4.11. RDR_to_PC_Error

This message returns an Error message if the device received an incorrect command.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-----------|--|
| 0 | bMessageType | 1 | 53h | - |
| 1 | dwLength | 4 | 00000000h | Size of extra data this message. |
| 5 | bSlot | 1 | - | Same value as in Bulk-OUT message |
| 6 | bSeq | 1 | - | Same value as in Bulk-OUT message |
| 7 | bStatus | 1 | - | Slot status register as defined in Appendix B |
| 8 | bErrorCode | 1 | - | 01h = Checksum error 02h = Timeout 03h = Command error 04h = Unauthorized 05h = Undefined error 06h = Receive data error 07h = Receive data length error |

| Offset | Field | Size | Value | Description |
|--------|-------|------|-------|---|
| | | | | 08h = Exceeded authentication retry error |
| 9 | abRFU | 1 | 00h | RFU |

5.2.4.12. RDR_to_PC_NotifySlotChange

This message notifies the card status by the reader.

| Offset | Field | Size | Value | Description |
|--------|----------------|------|-------|--|
| 0 | bMessageType | 1 | 50h | - |
| 1 | bmSlotICCState | 1 | - | Status: 02h = PICC absent 03h = PICC present |

5.2.4.13. RDR_to_PC_Sleep

This message notifies the sleep status by the reader.

| Offset | Field | Size | Value | Description |
|--------|--------------|------|-------|-------------|
| 0 | bMessageType | 1 | 52h | - |
| 1 | bParam | 1 | 00h | RFU |

5.2.5. Authentication

If the enforce encryption is enabled. Before any sensitive data can be loaded into the ACR1555U, the data processing server must be authenticated by the ACR1555U for the privilege to modify the secured data inside reader. In the ACR1555U, a mutual authentication method is used.

For better illustration, please refer to the figure below (the picture below has omitted the bridging device for simplicity and better illustration):

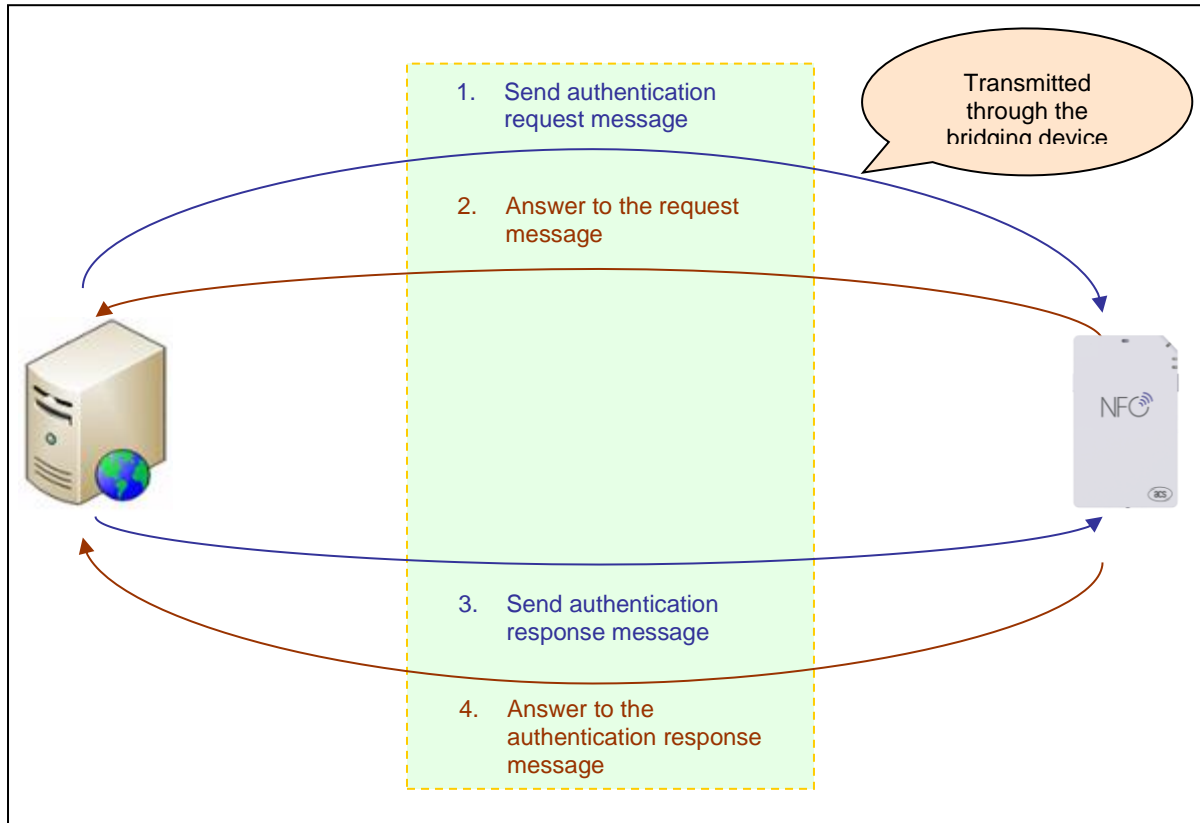

Figure 6: Authentication Procedure

After successful authentication, a 16-byte Session Key is generated in both the ACR1555U and the data server.

Default Customer Master Key (Hex): **41 43 52 31 35 35 35 55 2D 41 31 20 41 75 74 68**

Note: The reader will be locked and unusable once incorrect authentication keys are entered more than ten (10) times.

For more detailed information, you may contact an ACS sales representative

5.3. PCSC API

This section will describe some of the PCSC API for application programming usage. For more details, please refer to Microsoft MSDN Library or PCSC workgroup.

5.3.1. SCardEstablishContext

The SCardEstablishContext function establishes the resource manager context within which database operations are performed.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379479%28v=vs.85%29.aspx>

This function should be performed first before any other PCSC operation.

Example:

```
#define SCARD_SCOPE_USER 0

SCARDCONTEXT hContext;
int retCode;
void main ()
{
    // To establish the resource manager context and assign it to "hContext"
    retCode = SCardEstablishContext(SCARD_SCOPE_USER,
                                   NULL,
                                   NULL,
                                   &hContext);
    if (retCode != SCARD_S_SUCCESS)
    {
        // Establishing resource manager context failed
    }
    else
    {
        // Establishing resource manager context successful
        // Further PCSC operation can be performed
    }
}
```

5.3.2. SCardListReaders

The SCardListReaders function provides the list of readers within a set of named reader groups, eliminating duplicates.

The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379793%28v=vs.85%29.aspx>

Example:

```
#define SCARD_SCOPE_USER 0

SCARDCONTEXT hContext; // Resource manager context
int retCode;
char readerName [256]; // List reader name

void main ()
{
    // To establish the resource manager context and assign to "hContext"
    retCode = SCardEstablishContext(SCARD_SCOPE_USER,
        NULL,
        NULL,
        &hContext);
    if (retCode != SCARD_S_SUCCESS)
    {
        // Establishing resource manager context failed
    }
    else
    {
        // Establishing resource manager context successful
        // List the available reader which can be used in the system
        retCode = SCardListReaders (hContext,
            NULL,
            readerName,
            &size);
        if (retCode != SCARD_S_SUCCESS)
        {
            // Listing reader fail
        }
        if (readerName == NULL)
        {
            // No reader available
        }
        else
        {
            // Reader listed
        }
    }
}
}
```

5.3.3. SCardConnect

The SCardConnect function establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379473%28v=vs.85%29.aspx>

Example:

```
#define SCARD_SCOPE_USER 0

SCARDCONTEXT      hContext;          // Resource manager context
SCARDHANDLE       hCard;            // Card context handle
unsigned long     dwActProtocol;    // Establish active protocol
int               retCode;
char              readerName [256]; // List reader name
char              rName [256];     // Reader name for connection

void main ()
{
    ...
    if (readerName == NULL)
    {
        // No reader available
    }
    else
    {
        // Reader listed
        rName = "ACS ACR1555 1S CL Reader PICC 0"; // Depends on what
                                                    // reader be used
                                                    // Should connect to
                                                    // PICC interface

        retCode = SCardConnect(hContext,
                                rName,
                                SCARD_SHARE_SHARED,
                                SCARD_PROTOCOL_T0,
                                &hCard,
                                &dwActProtocol);
        if (retCode != SCARD_S_SUCCESS)
        {
            // Connection failed (May be because of incorrect reader
            // name, or no card was detected)
        }
        else
        {
            // Connection successful
        }
    }
}
```

5.3.4. SCardControl

The SCardControl function gives you direct control of the reader. You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. The effect on the state of the reader depends on the control code.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379474%28v=vs.85%29.aspx>

Note: Commands from **Escape Command** use this API for sending.

Example:

```
#define SCARD_SCOPE_USER 0

#define EscapeCommand 0x310000 + 3500*4
SCARDCONTEXT hContext; // Resource manager context
SCARDHANDLE hCard; // Card context handle
unsigned long dwActProtocol; // Established active protocol
int retCode;
char readerName [256]; // Lists reader name
char rName [256]; // Reader name for connection
BYTE SendBuff[262], // APDU command buffer
RecvBuff[262]; // APDU response buffer
BYTE FWVersion [20], // For storing firmware
version message
BYTE ResponseData[50]; // For storing card response
DWORD SendLen, // APDU command length
RecvLen; // APDU response length

void main ()
{
    ...
    rName = "ACS ACR1555 1S CL Reader PICC 0"; // Depends on what
reader will be used
// Should connect to
PICC interface

    retCode = SCardConnect(hContext,
        rName,
        SCARD_SHARE_DIRECT,
        SCARD_PROTOCOL_T0| SCARD_PROTOCOL_T1,
        &hCard,
        &dwActProtocol);
    if (retCode != SCARD_S_SUCCESS)
    {
        // Connection failed (may be because of incorrect reader
name, or no card was detected)
    }
    else
    {
        // Connection successful
        RecvLen = 262;
        // Get firmware version
        SendBuff[0] = 0xE0;
        SendBuff[1] = 0x00;
        SendBuff[2] = 0x00;
        SendBuff[3] = 0x18;
        SendBuff[4] = 0x00;
    }
}
```

```
SendLen = 5;
retCode = SCardControl ( hCard,
    EscapeCommand,
    SendBuff,
    SendLen,
    RecvBuff,
    RecvLen,
    &RecvLen);
if (retCode != SCARD_S_SUCCESS)
{
    // APDU sending failed
    return;
}
else
{
    // APDU sending successful
    // The RecvBuff stores the firmware version message.
    for (int i=0;i< RecvLen-5;i++)
    {
        FWVersion[i] = RecvBuff [5+i];
    }
}
// Connection successful
RecvLen = 262;

// Turn Green LED on, turn Red LED off
SendBuff[0] = 0xE0;
SendBuff[1] = 0x00;
SendBuff[2] = 0x00;
SendBuff[3] = 0x29;
SendBuff[4] = 0x01;
SendBuff[5] = 0x02; // Green LED On, Red LED off
SendLen = 6;
retCode = SCardControl ( hCard,
    EscapeCommand,
    SendBuff,
    SendLen,
    RecvBuff,
    RecvLen,
    &RecvLen);
if (retCode != SCARD_S_SUCCESS)
{
    // APDU sending failed
    return;
}
else
{
    // APDU sending success
}
```

5.3.5. SCardTransmit

The SCardTransmit function sends a service request to the smart card and expects to receive data back from the card.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379804%28v=vs.85%29.aspx>

Note: APDU Commands (i.e. the commands sent to connected card, **PCSC Pseudo APDU (with Proprietary Extension) for PICC**, and **Proprietary Pseudo APDU for PICC**) use this API for sending.

Example:

```
#define SCARD_SCOPE_USER      0

SCARDCONTEXT      hContext;          // Resource manager context
SCARDHANDLE        hCard;            // Card context handle
unsigned long      dwActProtocol;    // Established active protocol
int                retCode;
char               readerName [256]; // List reader name
char               rName [256];     // Reader name for connect
BYTE               SendBuff[262];   // APDU command buffer
BYTE               RecvBuff[262];   // APDU response buffer
BYTE               CardID [8],      // For storing the FeliCa IDM/
                                   MIFARE UID
BYTE               ResponseData[50]; // For storing card response
DWORD              SendLen,         // APDU command length
                  RecvLen;         // APDU response length
SCARD_IO_REQUEST   ioRequest;

void main ()
{
    ...
    rName = "ACS ACR1555 1S CL Reader PICC 0"; // Depends on what
                                                // reader should be used
                                                // Should connect to PICC
                                                // interface

    retCode = SCardConnect(hContext,
                           rName,
                           SCARD_SHARE_SHARED,
                           SCARD_PROTOCOL_T0,
                           &hCard,
                           &dwActProtocol);
    if (retCode != SCARD_S_SUCCESS)
    {
        // Connection failed (May be because of incorrect reader
        // name, or no card was detected)
    }
    else
    {
        // Connection successful
        ioRequest.dwProtocol = dwActProtocol;
        ioRequest.cbPciLength = sizeof(SCARD_IO_REQUEST);
        RecvLen = 262;
    }
}
```

```
// Get MIFARE UID/ FeliCa IDM
SendBuff[0] = 0xFF;

}
```

5.3.6. SCardDisconnect

The **SCardDisconnect** function terminates a connection previously opened between the calling application and a *smart card* in the target *reader*.

Refer to: <http://msdn.microsoft.com/en-us/library/windows/desktop/aa379475%28v=vs.85%29.aspx>

This function is used to end the PCSC Operation.

Example:

```
#define SCARD_SCOPE_USER 0

SCARDCONTEXT      hContext;          // Resource manager context
SCARDHANDLE       hCard;             // Card context handle
unsigned long     dwActProtocol;     // Established active protocol
int               retCode;

void main ()
{
    ...
    // Connection successful
    ...
    retCode = SCardDisconnect(hCard, SCARD_RESET_CARD);
    if (retCode != SCARD_S_SUCCESS)
    {
        // Disconnection failed
    }
    else
    {
        // Disconnection successful
    }
}
}
```

5.3.7. APDU Flow

5.3.8. Escape Command Flow

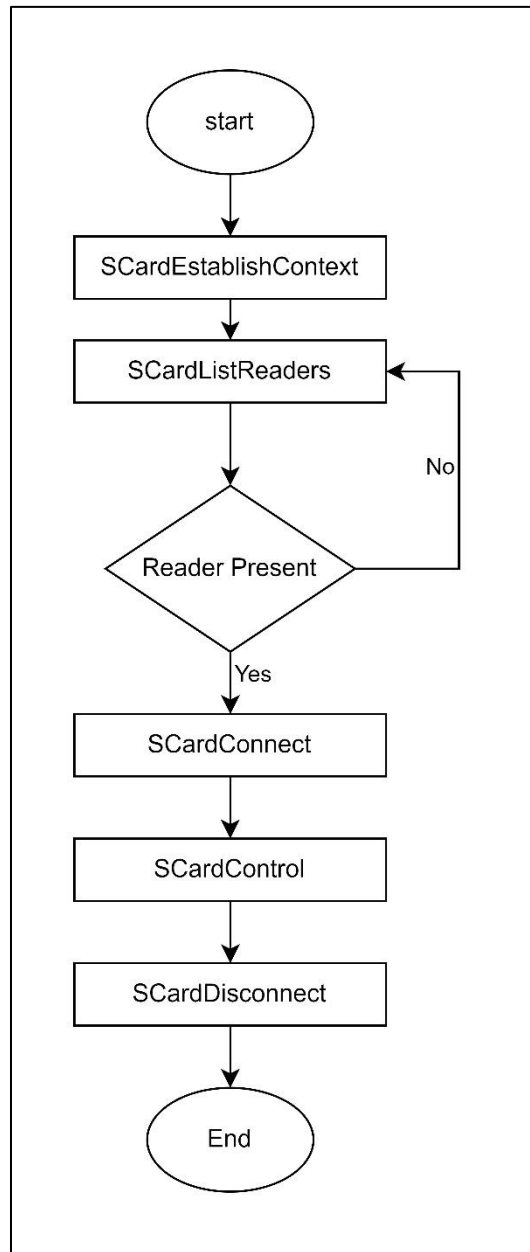

Figure 8: ACR1555U Escape Command Flow

5.4. Contact Smart Card Protocol

5.4.1. ACOS6-SAM Commands

This section contains SAM-specific commands. CCID Host could send Card Native Command or APDU to the Reader by using CCID Message PC_to_RDR_XfrBlock (corresponding to SCardTransmit() in PCSC API).

Note: For complete information on ACOS6-SAM Commands and Scenarios, please contact an ACS representative for a copy of the ACOS6-SAM Reference Manual.

5.4.1.1. Generate Key

This command is used to generate a diversified key to load into the ACOS3/6 card or other cards from deviation data such as a client card serial number. This command is catered for client card issuance purposes.

| APDU | Description |
|------|---|
| CLA | 80h |
| INS | 88h |
| P1 | 00h Generate 8 Byte Key 01h Generate 16 Byte Key 02h Generate 24 Byte Key |
| P2 | Key index of Master Key to generate Derived Key |
| P3 | 08h |
| Data | Input Data |

Specific Response Status Bytes

| SW1 SW2 | Description |
|---------|--|
| 69 86h | No DF selected |
| 6A 86h | Invalid P1 or P2 |
| 67 00h | Incorrect P3, must be 08h |
| 6A 83h | Referenced key record not found in EF2 |
| 69 81h | Invalid EF2 (record size, file type, etc.) |
| 6A 88h | EF2 not found |
| 62 83h | Current DF is blocked; EF2 is blocked |
| 69 83h | Usage counter is zero. |
| 69 82h | Security condition not satisfied |
| 6A 87h | Referenced Master Key is not capable of 3-DES encryption |
| 61 08h | Command completed, issue GET RESPONSE to get the result |

5.4.1.2. Diversify (or load) Key Data

This command prepares the SAM card to perform ciphering operations by diversifying and loading the key. It takes the serial number and CBC initial vector as command data input.

| 90 00h | Target key generated, and ready in SAM memory |

5.4.1.3. Encrypt

This command is used to encrypt data using DES or 3DES with either:

1. The session key created by the mutual authentication procedure with an ACOS3/6, DESFire®, DESFire® EV1 or MIFARE Plus card.
2. A diversified key (secret code).
3. A bulk encryption key.
4. Encrypt the diversified secret code with the session key.
5. Prepare ACOS3 secure messaging command given a non-SM command.

5.4.1.4. Decrypt

This command is used to decrypt data using DES or 3DES or AES with either:

1. The session key created by the mutual authentication procedure with an ACOS3/6, MIFARE DESFire, MIFARE DESFire EV1 or MIFARE Plus card.
2. A diversified key (secret code).
3. A bulk encryption key.
4. Decrypt the diversified secret code with the session key.
5. Verify and Decrypt ACOS3 secure-messaging response.

Verify and Decrypt ACOS3 SM Response:

| P3 | 8 – (P1 = 00h, 01h, 02h, 80h, 81h) 16 – (P1 = 03h) |
| Data | Card Challenge Data |

Specific Response Status Bytes

| SW1 SW2 | Description |
|---------|---|
| 69 86h | No DF selected |
| 6A 86h | Invalid P1 or P2 |
| 67 00h | Incorrect P3, must be 08h |
| 6A 83h | ACOS Key (KT or KC) is not ready (use Diversify to generate this key) |
| 69 82h | Security condition not satisfied |
| 61 10h | Command completed, issue GET RESPONSE to get the result |

5.4.1.6. Verify Authentication

This command is used to verify the ACOS 3/6, MIFARE Ultralight C, MIFARE DESFire/MIFARE DESFire EV1 or MIFARE Plus card to the terminal. The Session Key Ks would also be generated internally.

| APDU | Description |
|------|--|
| CLA | 80h |
| INS | 7Ah |
| P1 | 00h – 3DES (P2 = 0) 01h – DES (P2 = 0) 02h – 3KDES (P2 = 0 · ACOS3) 03h – AES (P2 = 0 · ACOS3) Other – RFU |
| P2 | 00h – Verify ACOS3/6 Authenticate Return 01h – Verify MIFARE Ultralight C®/ DESFire®/ DESFire® EV1 Authenticate Return 02h – Verify MIFARE Plus Authenticate return |
| P3 | 08h – (P2 = 0, P2 = 1 and Session Key is DES/3DES) 16h – (P2 = 1 and Session Key is 3KDES/AES) 16h – (P2=02, and MIFARE Plus return data ek(RndA')) 32h – (P2=02, and MIFARE Plus return data ek(TI+PICCap2+PCDcap2)) |
| Data | ACOS 3/6: DES (Ks, RND _T) MIFARE DESFire/ DESFire EV1 return data: ek(RndA') MIFARE Plus return data ek(RndA') or ek(TI+PICCap2+PCDcap2) |

Specific Response Status Bytes

| SW1 SW2 | Description |
|---------|---|
| 69 86h | No DF selected |
| 6A 86h | Invalid P1 or P2 |
| 67 00h | Incorrect P3, must be 08h |
| 6A 83h | ACOS-SAM Session Key or RND _T are not ready. Use PREPARE AUTHENTICATION to build these keys. |
| 69 82h | Data is incorrect |
| 90 00h | Data is correct, ACOS Mutual Authentication is successful |

5.4.1.7. Verify ACOS Inquire Account

This command is used to verify the ACOS3/6 card's Inquire Account purse command. It would verify that the MAC checksum returned by ACOS3/6 are correct with the SAM's diversified key.

| APDU | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

5.4.1.10. Get Key

This command allows secure key injection from the current SAM's Key File (SFI=02h) into another ACOS6/ACOS6-SAM with or without key diversification. Using this ensures that the keys to be injected are protected by encryption and message authentication codes.

The Get Key command also allows secure key injection from the current SAM's Key File (SFI=02h) into ACOS7/10, MIFARE DESFire, MIFARE DESFire EV1 or MIFARE Plus card with key diversification. Using this ensures that the key to be injected is protected by encryption and message authentication codes.

If bit 7 of the Special Function Flag (Key Injection Only Flag) of the **Card Header Block** (Section 3.2 of ACOS6-SAM Reference Manual) has been set and the key file has been activated, Get Key must be used for loading or changing keys in the card. Setting this bit will disable Read Record command for the key file under any circumstances after activation.

Before this command is to be executed, a session key is already established with the target card with the mutual authentication procedure of **Mutual Authentication** (Section 5.3 of ACOS6-SAM Reference Manual) or the MIFARE Plus/MIFARE DESFire mutual authentication procedure.

Note: The GET KEY command can only get the Key data.

Specific Response Status Bytes

| SW1 SW2 | Description |
|---------|--|
| 69 85h | SAM Session Key not ready |
| 62 83h | Current DF is blocked, or Target EF is blocked |
| 69 86h | No DF selected |
| 69 81h | Wrong file type of Key file, it should be Internal Linear Variable File |
| 69 82h | Target file's header block has wrong checksum, or security condition not satisfied |
| 6A 86h | Invalid P1 or P2 |
| 67 00h | Incorrect P3 |
| 6A 83h | Target Key is not ready or Key Length less than 16 |
| 61 1Ch | Success, use GET RESPONSE to get the result |

5.5. Contactless Smart Card Protocol

5.5.1. ATR Generation

If the reader detects a PICC, an ATR will be sent to the PCSC driver for identifying the PICC.

5.5.1.1. ATR Format for ISO14443 Part 3 PICCs

| Byte | Value | Designation | Description |
|---------|--------------|----------------|--|
| 0 | 3Bh | Initial Header | |
| 1 | 8Nh | T0 | Higher nibble 8 means: no TA1, TB1, TC1 only TD1 is following. Lower nibble N is the number of historical bytes (HistByte 0 to HistByte N-1) |
| 2 | 80h | TD1 | Higher nibble 8 means: no TA2, TB2, TC2 only TD2 is following. Lower nibble 0 means T = 0 |
| 3 | 01h | TD2 | Higher nibble 0 means no TA3, TB3, TC3, TD3 following. Lower nibble 1 means T = 1 |
| 4 ~ 3+N | 80h | T1 | Category indicator byte, 80 means A status indicator may be present in an optional COMPACT-TLV data object |
| | 4Fh | Tk | Application identifier Presence Indicator |
| | 0Ch | | Length |
| | RID | | Registered Application Provider Identifier (RID) # A0 00 00 03 06 |
| | SS | | Byte for standard |
| | C0 .. C1h | | Bytes for card name |
| | 00 00 00 00h | RFU | RFU # 00 00 00 00 |
| 4+N | UU | TCK | Exclusive-oring of all the bytes T0 to Tk |

Example:

ATR for MIFARE Classic 1K = {3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 01 00 00 00 00 6Ah}

Where:

Length (YY) = 0Ch
RID = {A0 00 00 03 06h} (PC/SC Workgroup)
Standard (SS) = 03h (ISO 14443A, Part 3)
Card Name (C0 .. C1) = {00 01h} (MIFARE Classic 1K)
Standard (SS) = 03h: ISO 14443A, Part 3
= 11h: FeliCa

Card Name (C0 .. C1):

5.5.1.2. ATR Format for ISO14443 Part 4 PICCs

| Byte | Value | Designation | Description | | | | | | |
|---------|----------------------------|------------------------------|--|--|----------|--------|----------------------------|------------------------------|--|
| 0 | 3Bh | Initial Header | | | | | | | |
| 1 | 8Nh | T0 | Higher nibble 8 means: no TA1, TB1, TC1 only TD1 is following. Lower nibble N is the number of historical bytes (HistByte 0 to HistByte N-1) | | | | | | |
| 2 | 80h | TD1 | Higher nibble 8 means: no TA2, TB2, TC2 only TD2 is following. Lower nibble 0 means T = 0 | | | | | | |
| 3 | 01h | TD2 | Higher nibble 0 means no TA3, TB3, TC3, TD3 following. Lower nibble 1 means T = 1 | | | | | | |
| 4 ~ 3+N | XX | T1 | Historical Bytes: ISO 14443-A: The historical bytes from ATS response. Refer to the ISO 14443-4 specification. ISO 14443-B: <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Byte 1~4</th> <th>Byte 5~7</th> <th>Byte 8</th> </tr> </thead> <tbody> <tr> <td>Application Data from ATQB</td> <td>Protocol Info Byte from ATQB</td> <td>Higher nibble=MBLI from ATTRIB command Lower nibble (RFU)=0</td> </tr> </tbody> </table> | Byte 1~4 | Byte 5~7 | Byte 8 | Application Data from ATQB | Protocol Info Byte from ATQB | Higher nibble=MBLI from ATTRIB command Lower nibble (RFU)=0 |
| | Byte 1~4 | Byte 5~7 | | Byte 8 | | | | | |
| | Application Data from ATQB | Protocol Info Byte from ATQB | | Higher nibble=MBLI from ATTRIB command Lower nibble (RFU)=0 | | | | | |
| XX | Tk | | | | | | | | |
| | | | | | | | | | |
| 4+N | UU | TCK | Exclusive-oring of all the bytes T0 to Tk | | | | | | |

Example 1:

ATR for MIFARE® DESFire® = {3B 81 80 01 80 80h} // 6 bytes of ATR

Note: Use the APDU "FF CA 01 00 00h" to distinguish the ISO 14443A-4 and ISO 14443B-4 PICCs, and retrieve the full ATS if available. ISO 14443A-3 or ISO 14443B-3/4 PICCs do have ATS returned.

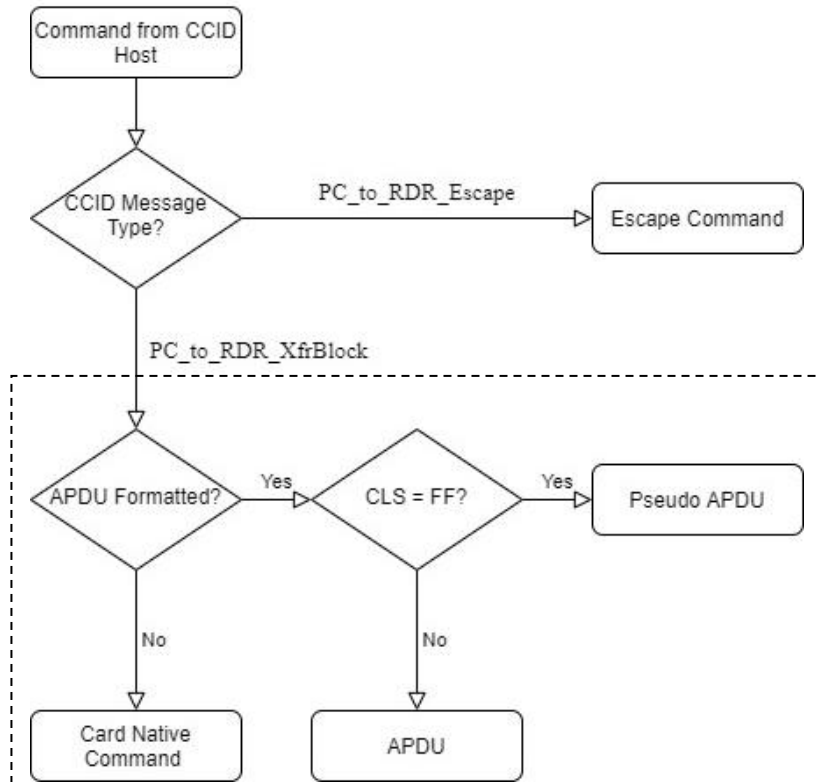

APDU Command = FF CA 01 00 00h
 APDU Response = 06 75 77 81 02 80 90 00h
 ATS = {06 75 77 81 02 80h}

Example 2:

ATR for EZ-Link = {3B 88 80 01 1C 2D 94 11 F7 71 85 00 BEh}
 Application Data of ATQB = 1C 2D 94 11h
 Protocol Information of ATQB = F7 71 85h
 MBLI of ATTRIB = 00h

5.5.2. APDU, Pseudo APDU and Card Native Command

User should use PC_to_RDR_XfrBlock Message to send APDU, Pseudo APDU and Card Native Command to the reader. After the command processing, the Reader will send back the response by RDR_to_PC_DataBlock Message.

CCID Host could send Card Native Command or APDU to the Reader by using CCID Message PC_to_RDR_XfrBlock (corresponding to SCardTransmit() in PCSC API). For PICC, if the card support ISO14443 part 4 protocol or Innovatron protocol, the Reader will pack the Command/APDU into the protocol frame and send to the card directly without any interpretation of the Command/APDU. If the card do not support neither protocol, a message “6A 81” will return to CCID Host.

Note: Due to Microsoft Window Smart Card Plug and Play, Microsoft Window may send some APDU to a card at the time of card present. This action will make a DESFire card entering ISO APDU mode such that the card become fail to receive a native command until a card reset. Usually Microsoft Window will reset the card (by PC_to_RDR_IccPowerOff) after 10s of inactive.

5.5.3. PCSC Pseudo APDU (with Proprietary Extension) for PICC

The following Pseudo APDUs are provided to access a contactless card indirectly. CCID Host could send these APDUs to Reader by using CCID Message PC_to_RDR_XfrBlock (corresponding to SCardTransmit() in PCSC API). After receiving of a Pseudo APDU, it will be interpreted to generate low level card command(s) and then send to card. After the card handling those low level command(s), Reader collect the response(s) from the card and create a response to send back to CCID Host.

5.5.3.1. Get Data [FF CA ...]

This command is used to read out the data obtained during activation process, such as serial number, protocol parameter etc.

Command

| Command | Class | INS | P1 | P2 | Le |
|----------|-------|-----|-----------|----|----------------------|
| Get Data | FFh | CAh | See below | | 00h (Full Length) |

Command Parameter

| P1 | P2 | Meaning |
|-----|-----|--|
| 00h | 00h | Get the UID/PUPI/SN of the Card |
| 01h | 00h | Get the ATS for Type A Part 4 |
| 02h | 00h | Get the following Card Type related data in transmission order: Type A: 2 bytes ATQA/ATVA + 4/7/10 Bytes UID + 1 bytes Last SAK. Type B: 12 bytes ATQB |
| 80h | 00h | Get the following Card Type related data in transmission order: Type A: 2 bytes ATQA/ATVA + 4/7/10 Bytes UID + 1/2/3 bytes SAK. Type B: 12 bytes ATQB FeliCa: 17 byte ATQ (+ 6 byte ATTR if activated) SRI: 8 byte UID + 1 byte Chip ID. ISO15693: 1 byte DSFID + 8 byte UID CTS: 4 byte SN + 2 byte ATQT Innovatron: 4 byte SN + 1 byte tag address. |

Response

| Response | Data Out | | |
|----------|----------|-----|-----|
| Result | Data | SW1 | SW2 |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

Examples:

To get the serial number of the “connected PICC”:

```
UINT8 GET_UID[5] = {FF, CA, 00, 00, 00};
```

To get the ATS of the “connected ISO 14443 A PICC”:

UINT8 GET_ATS[5] = {FF, CA, 01, 00, 00};

5.5.3.2. Load Key [FF 82 ...]

This command is used to set the Key Data to the internal key buffer specified by Key Buffer Number. The key buffer is volatile and its content would be used during authentication. This command will not generate card data transfer.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|--------------------------|-------|-----|-----|----------------------------|------------|----------|
| Load Authentication Keys | FFh | 82h | 00h | Key Buffer Number (0 to 1) | Key Length | Key Data |

Key Length/Data

| Card Type | Key Length (Lc) | Key Data (in Transmission/Storing Order) |
|--------------------------------------|-----------------|---|
| MIFARE Standard MIFARE Plus SL1 | 06h | 6 Bytes Crypto1 Key A/B. |
| MIFARE Plus SL1 MIFARE Plus SL2 | 16h | 6 Bytes Crypto1 Key A/B + 16 Bytes AES Key. |
| MIFARE Plus SL2 | 06h | 6 Bytes Encrypted Crypto1 Key A/B. |
| MIFARE UltraLightC MIFARE DESFire | 10h | 16 Bytes 2K3DES Key. |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

Example:

// Load a key {FF FF FF FF FF FFh} into the volatile memory location 00h.

APDU = {FF 82 00 00 06 FF FF FF FF FF FFh}

5.5.3.3. Authenticate [FF 86 00 00 05 ...]

This command is used to performing an authentication to the card to grand access of the protected blocks/pages. Before sending this command, User should use Load Key command to set the correct key data to the buffer specified by **Key Buffer Number**.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|--------------|-------|-----|-----|-----|-----|-----------|
| Authenticate | FFh | 86h | 00h | 00h | 05h | See Below |

Command Data

| Byte 0 | Byte 1 | Byte 2 | Byte 3 | Byte 4 |
|--------|-----------|---------|----------|-------------------|
| 01h | 00h (RFU) | Address | Key Type | Key Buffer Number |

Address and Key Type

| Card Type | Address | Key Type |
|---|----------------------------------|--|
| MIFARE Standard MIFARE Plus SL1 MIFARE Plus SL2 | 00h~FFh: Block 0~255 | 60h: Crypto1 Key A 61h: Crypto1 Key B |
| MIFARE UltraLightC | 00h (RFU) | 80h: 2K3DES |
| MIFARE DESFire | 00h~0Eh: DESFire Key Number 0~14 | 0Ah: 2K3DES |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

| Sectors (Total 16 sectors. Each sector consists of 4 consecutive blocks) | Data Blocks (3 blocks, 16 bytes per block) | Trailer Block (1 block, 16 bytes) |
|---|---|--------------------------------------|
| Sector 0 | 00h – 02h | 03h |
| Sector 1 | 04h – 06h | 07h |
| .. | .. | .. |
| .. | .. | .. |
| Sector 14 | 38h – 0Ah | 3Bh |
| Sector 15 | 3Ch – 3Eh | 3Fh |

} 1 KB

Table 11: MIFARE Classic 1K Memory Map

| Sectors (Total 32 sectors. Each sector consists of 4 consecutive blocks) | Data Blocks (3 blocks, 16 bytes per block) | Trailer Block (1 block, 16 bytes) |
|---|---|--------------------------------------|
| Sector 0 | 00h ~ 02h | 03h |
| Sector 1 | 04h ~ 06h | 07h |
| .. | | |
| .. | | |
| Sector 30 | 78h ~ 7Ah | 7Bh |
| Sector 31 | 7Ch ~ 7Eh | 7Fh |

} 1 KB

| Sectors (Total 8 sectors. Each sector consists of 16 consecutive blocks) | Data Blocks (15 blocks, 16 bytes per block) | Trailer Block (1 block, 16 bytes) |
|---|--|--------------------------------------|
| Sector 32 | 80h ~ 8Eh | 8Fh |
| Sector 33 | 90h ~ 9Eh | 9Fh |
| .. | | |
| .. | | |

| Data read/write | Data44 | Data45 | Data46 | Data47 | 15 |

} 512 bits
or
64 bytes

Table 13: MIFARE Ultralight Memory Map

Examples:

// To authenticate the Block 04h with a {TYPE A, key number 00h}. PC/SC V2.01, Obsolete
APDU = {FF 88 00 04 60 00h};

// To authenticate the Block 04h with a {TYPE A, key number 00h}. PC/SC V2.07
APDU = {FF 86 00 00 05 01 00 04 60 00h}

Note: MIFARE Ultralight does not need to do any authentication. The memory is free to access.

5.5.3.4. Read Binary Blocks [FF B0 ...]

This command is used to read specified number of byte of data from PICC starting from the specified block/page address. Depend on card type, user may need to perform authentication to get the access right of the required block(s)/page(s) before sending this command.

Command:

| Command | Class | INS | P1 | P2 | Le |
|--------------------|-------|-----|------------------|----|-------------------------|
| Read Binary Blocks | FFh | B0h | Mode and Address | | Number of Bytes to Read |

P1/P2 (Mode and Address)

| Card Type | P1[7:4] Mode | P1[3:0] + P2[7:0] Starting Address (MSB First) |
|---|--|---|
| MIFARE Standard MIFARE Plus SL1 MIFARE Plus SL2 | 00h: Skip Trailers 08h: With Trailers | 000h~0FFh: Block 0~255 |
| MIFARE UltraLight MIFARE UltraLightC | 00h (Reserved) | 000h~02Fh: Page 0~47 |
| SRIX4K/SRT512 | 00h (Reserved) | 000h~07Fh: Block 0~127 0FFh: System Area |
| PicoPass | 00h (Reserved) | 000h~0FFh: Block 0~255 |
| ISO15693 | 00h (Reserved) | 000h~0FFh: Block 0~255 |
| Topaz/NFC Type-1 Tag | 00h (Reserved) | 000h~7FFh: Byte Address |

Le (Number of Bytes to Read)

| Type | Byte 0 | Byte 1 | Byte 2 |
|----------|--|--|--------|
| Short | 00h: Read 256 bytes 01h~FFh: Read 1~255 bytes | -- | |
| Extended | 00h | 0000h: Read 65536 bytes 0001h~FFFFh: Read 1~65535 bytes | |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

Examples:

// Read 16 bytes from the binary block 04h (MIFARE Classic 1K or 4K)

APDU = FF B0 00 04 10h

// Read 240 bytes starting from the binary block 80h (MIFARE Classic 4K)

// Block 80h to Block 8Eh (15 blocks)

APDU = FF B0 00 80 F0h

5.5.3.5. Update Binary Blocks [FF D6 ...]

This command is used to write specified number (must be multiple of block/page size) of bytes to PICC starting from the specified block/page address. Depend on card type, user may need to perform authentication to get the access right of the required block(s)/page(s) before sending this command.

User should take a great care for writing to block/page that may change the security setting of the card (e.g. sector trailers of MIFARE card) as this may lock the card if incorrect data is written or operation is failed. As a result, to minimize the risk of card locking, it is not recommended to write to multiple block/page in a single APDU command if security block/page is involved.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|----------------------|-------|-----|------------------|----|--------------------------|------------|
| Update Binary Blocks | FFh | D6h | Mode and Address | | Number of Bytes to Write | Data Bytes |

P1/P2 (Mode and Address) and Write Size alignment (Block/Page Size)

| Card Type | P1[7:4] Mode | P1[3:0] + P2[7:0] Starting Address (MSB First) | Blk/Page Size (Bytes) |
|---|--|--|------------------------|
| MIFARE Standard MIFARE Plus SL1 MIFARE Plus SL2 | 0x0: Skip Trailers 0x8: With Trailers | 000h~0FFh: Block 0~255 | 16 |
| MIFARE Ultralight MIFARE UltraLightC | 0x0 (Reserved) | 000h~02Fh: Page 0~47 | 4 |
| SRIX4K/SRT512 | 0x0 (Reserved) | SRIX4K/SRT512 | 4 |
| PicoPass | 0x0 (Reserved) | PicoPass | 8 |
| ISO15693 | 0x0 (Reserved) | ISO15693 | 1 ~ 32 |
| Topaz/NFC Type-1 Tag | 0x0: with Erase 0x8: without Erase | 000h~7FFh: Byte Address | 1(Addr 78h) or 8(Else) |

Lc (Number of Bytes to Write)

| Type | Byte 0 | Byte 1 | Byte 2 |
|-------|----------------------------|--------|--------|
| Short | 01h~FFh: Write 1~255 bytes | -- | |

| Type | Byte 0 | Byte 1 | Byte 2 |
|----------|--------|----------------------------------|--------|
| Extended | 00h | 0001h~FFFFh: Write 1~65535 bytes | |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

Examples:

// Update the binary block 04h of MIFARE Classic 1K/4K with Data {00 01 .. 0Fh}

APDU = {FF D6 00 04 10 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E 0Fh}

// Update the binary block 04h of MIFARE Ultralight with Data {00 01 02 03h}

APDU = {FF D6 00 04 04 00 01 02 03h}

5.5.4. APDU Commands for PCSC 2.0 Part 3 (Version 2.02 or above)

PCSC2.0 Part 3 commands are used to transparently pass data from an application to a contactless tag, return the received data transparently to the application and protocol, and switch the protocol simultaneously.

5.5.4.1. PCSC 2.0 Part 3 Flow

Figure 9: Transparent Session Flow

5.5.4.2. Command and Response APDU Format

Command Format

| CLA | INS | P1 | P2 | Lc | Data In |
|-----|-----|-----|----------|---------|---------------|
| FFh | C2h | 00h | Function | DataLen | Data[DataLen] |

Where Functions (1 byte):

- 00h = Manage Session
- 01h = Transparent Exchange
- 02h = Switch Protocol
- Other = RFU

Response Format

| Data Out | SW1 | SW2 |
|----------------------------|-----|-----|
| Data Field BER-TLV encoded | | |

Every command returns SW1 and SW2 together with the response data field (if available). The SW1 SW2 is based on ISO 7816. SW1 SW2 from the C0 data object below should also be used.

C0 data element Format

| Tag | Length (1 byte) | SW2 |
|-----|-----------------|--------------|
| C0h | 03h | Error Status |

Error Status Description

| Error Status | Description |
|--------------|--|
| XX SW1 SW2 | XX = number of the bad data object in the APDU 00 = general error of APDU 01 = error in the 1 st data object 02 = error in the 2 nd data object |
| 00 90 00h | No error occurred |
| XX 62 82h | Data object XX warning, requested information not available |
| XX 63 00h | No information |
| XX 63 01h | Execution stopped due to failure in other data object |
| XX 6A 81h | Data object XX not supported |
| XX 67 00h | Data object XX with unexpected length |
| XX 6A 80h | Data object XX with unexpected value |
| XX 64 00h | Data Object XX execution error (no response from IFD) |
| XX 64 01h | Data Object XX execution error (no response from ICC) |
| XX 6F 00h | Data object XX failed, no precise diagnosis |

The first value byte indicates the number of the erroneous data object XX, while the last two bytes indicate the explanation of the error. SW1 SW2 values based on ISO 7816 are allowed.

If there are more than one data objects in the C-APDU field and one data object failed, IFD can process the following data objects if they do not depend on the failed data objects.

5.5.4.3. Manage Session [FF C2 00 00 ...]

This command allows user to start a session with polling disable for the following communication. User should end the session as soon as those communications finished.

Please note, this command may make the reader fail detect a card present/absence if used incorrectly. This fail may be unable to recover automatically until a logical/physical reader disconnection.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | Le |
|----------------|-------|-----|-----|-----|-----------------|---------|--------|
| Manage Session | FFh | C2h | 00h | 00h | Cmd Data Length | Cmd TLV | --/00h |

Response Code

| Rsp Data | SW1 SW2 | Meaning |
|----------|---------|--|
| -- | 90 00h | The operation was completed successfully. |
| Rsp TLV | 90 00h | For Le = 0x00, One of Command TLV Fail. For Detail of Error, refer to Rsp TLV. |
| -- | 6X XXh | For Le = --, One of Command TLV Fail. |

Cmd TLV

| Cmd | Meaning |
|----------------------------|---|
| Start Session: 81 00h | Start a Session and Disable Polling. |
| RF Off: 83 00h | Turn off RF. |
| Timer: 5F 46 04h [TIME] | Set the sleep time before the next RF On/Off TLV. [TIME]: 4 byte value (MSB first) in range from 1000 to 100000 us. The actual sleep time will round up to nearest 1000us. |
| RF On: 84 00h | Turn on RF. |
| End Session: 82 00h | End a Session and Re-enable Polling. |

Rsp TLV

| Rsp | Meaning |
|-------------------------------|--|
| TLV Error: C0 03 NN 6X XXh | Error in the NN th Command TLV. |

5.5.4.3.1. Start Session Data Object

This command is used to start a transparent session. Once the session has started, auto-polling will be disabled until the session is ended.

Start Session Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|-------|
| 81h | 00h | - |

5.5.4.3.2. End Session Data Object

This command ends the transparent session. The auto-polling will be reset to the state before the session has started.

End Session Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|-------|
| 82h | 00h | - |

5.5.4.3.3. Turn Off the RF Data Object

This command turns off the antenna field.

Turn off RF Field Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|-------|
| 83h | 00h | - |

5.5.4.3.4. Turn On the RF Data Object

This command turns on the antenna field.

Turn on the RF Field Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|-------|
| 84h | 00h | - |

5.5.4.3.5. Timer Data Object

This command creates a 32-bit timer data object in unit of 1 μ s.

Example: If there is a timer data object with 5000 μ s between RF Turn Off Data Object and RF Turn On Data Object, the reader will turn off the RF field for about 5000 μ s before it is turned on.

Timer Data Object

| Tag | Length (1 byte) | Value |
|--------|-----------------|-----------------|
| 5F 46h | 04h | Timer (4 bytes) |

5.5.4.4. Transparent Exchange [FF C2 00 01 ...]

This command allows user transmit and receive any bit or bytes to/from card, with option to configure various link and transport layer (e.g. ISO14443 part 4) and some link layer redundancy (CRC and parity) optionally. User could embed any card specific raw data into this pseudo APDU and then send to the card.

Please note, this command may interference internal handling of card support, may change the card status without notification to the driver/firmware and may require a card reset and/or removal to bring the driver/firmware back to normal.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | Le |
|----------------------|-------|-----|-----|-----|-----------------|---------|-----|
| Transparent Exchange | FFh | C2h | 00h | 01h | Cmd Data Length | Cmd TLV | 00h |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

Cmd TLV

| Cmd | Meaning |
|--|--|
| Transceive Flag: 90 02 [Flag] 00h | Set the Flag for the following Transceive TLV. Flag[7:5]: RFU; Set to 0 Flag[4]: Set to disable ISO14443 Part 4 Flag[3]: Set to disable receiving parity handling Flag[2]: Set to disable transmitting parity handling Flag[1]: Set to disable receiving CRC handling Flag[0]: Set to disable transmitting CRC handling If this TLV is missing, the Flag value set in previous command is used. If Flag value is never set, current protocol value is used. |
| Transmit Bit Frame: 91 01h [NumBit] | Set the Bit Frame for the following Transceive TLV. If this TLV is missing, the default value is 0. NumBit[7:3]: RFU; Set to 0 NumBit[2:0]: Number of valid bits in last byte (0 means all valid). |
| Timer: 5F 46 04h [TIME] | Set the timeout for the following Transceive TLV. [TIME]: 4 byte value (MSB first) in range 1 us to 1000000 us. The actual timeout will round up to nearest 302.07 x 20~15 us. If this TLV is missing, the FWTI value set previously will be used as timeout. |
| Set FWTI: FF 6E 03 03 01h [FWTI] | Set FWT/Timeout for Transceive. If FWTI does not set by any previous "FF C2h ..." command, the default value is 0. |

| Cmd | Meaning |
|----------------------------------|---|
| | FWTI: 0 ~ 15, FWT/Timeout = 302.07 x 2FWTI us |
| Transceive: 95h [Size] [Data] | Size: Size of Data coded in BER-TLV length field. Data: Data to be Transmit. |

Rsp TLV

| Rsp | Meaning |
|---|---|
| Receive Bit framing: 92 01h [NumBit] | NumBit[7:3]: RFU; Set to 0. NumBit[2:0]: Number of valid bits in last byte (0 means all valid). |
| Response: 97h [Size] [Data] | Size: Size of Data coded in BER-TLV length field. Data: Data Received. |
| Response Status: 96 02h [Status] 00h | Status [7:4]: RFU. Status[3]: Framing Error. Status[2]: Parity Error. Status[1]: RFU. Status[0]: CRC Error. |

5.5.4.4.1. Transmission and Reception Flag Data Object

This command defines the framing and RF parameters for the following transmission.

Transmission and Reception Flag Data Object

| Tag | Length (1 byte) | Value | | |
|-----|-----------------|--------|--|--------|
| | | Byte 0 | | Byte 1 |
| | | bit | Description | |
| 90h | 02h | 0 | 0 – append CRC in the transmit data 1 – do not append CRC in the transmit data | 00h |
| | | 1 | 0 – CRC checking from the received data 1 – no CRC checking from the received data | |
| | | 2 | 0 – insert parity in the transmit data 1 – do not insert parity | |
| | | 3 | 0 – expect parity in received date 1 – do not expect parity (i.e. no parity checking) | |
| | | 4 | 0 – append protocol prologue in the transmit data or discard from the response 1 – do not append or discard protocol prologue if any (e.g. PCB, CID, NAD) | |
| | | 5-7 | RFU | |

5.5.4.4.2. Transmission Bit Framing Data Object

This command defines the number of valid bits of the last byte of data to transmit or transceive.

Transmission bit Framing Data Object

| Tag | Length (1 byte) | Value | |
|-----|-----------------|-------|--|
| | | bit | Description |
| 91h | 01h | 0-2 | Number of valid bits of the last byte (0 means all bits are valid) |
| | | 3-7 | RFU |

Transmission bit framing data object shall be together with “transmit” or “transceive” data object only. If this data object does not exist, it means all bits are valid.

5.5.4.4.3. Transceive Data Object

This command transmits and receives data from the ICC. After transmission is complete, the reader will wait until the time given in the timer data object.

If no timer data object was defined in the data field, the reader will wait for the duration given in the Set Parameter FWTI Data Object. If no FWTI is set, the reader will wait for about 302 μ s.

Transceive Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|----------------|
| 95h | DataLen | Data (N Bytes) |

5.5.4.4.4. Timer Data Object

This command creates a 32-bit timer data object in unit of 1 μ s.

Example: If there is a timer data object with 5000 μ s, the reader will wait the following Transceive TLV for about 5000 μ s before timeout.

Timer Data Object

| Tag | Length (1 byte) | Value |
|--------|-----------------|-----------------|
| 5F 46h | 04h | Timer (4 bytes) |

5.5.4.4.5. Response Bit Framing Data Object

Inside the response, this command is used to notify the received transmission bit Framing Data Object

| Tag | Length (1 byte) | Value | |
|-----|-----------------|-------|--|
| | | bit | Description |
| 92h | 01h | 0-2 | Number of valid bits of the last byte (0 means all bits are valid) |
| | | 3-7 | RFU |

Transmission bit framing data object shall be together with “transmit” or “transceive” data object only. If this data object does not exist, it means all bits are valid.

5.5.4.4.6. Response Status Data Object

Inside the response, this command is used to notify the received data status.

Response Status Data Object

| Tag | Length (1 byte) | Value | | |
|-----|-----------------|--------|--|--------|
| | | Byte 0 | | Byte 1 |
| | | Bit | Description | |
| 96h | 02h | 0 | 0 – CRC is OK or no checked 1 – CRC check fail | RFU |
| | | 1 | 0 – no collision 1 – collision detected | |
| | | 2 | 0 – no parity error 1 – parity error detected | |
| | | 3 | 0 – no framing error 1 – framing error detected | |
| | | 4 - 7 | RFU | |

5.5.4.4.7. Response Data Object

Inside the response, this command is used to notify the received data status.

Response Data Object

| Tag | Length (1 byte) | Value |
|-----|-----------------|--------------------|
| 97h | DataLen | ReplyData (N Byte) |

5.5.4.5. Switch Protocol [FF C2 00 02 ...]

This command allows user to switch to specify protocol, select protocol layer and parameter.

Please note, this command may interference internal handling of card support, may change the card status without notification to the driver/firmware and may require a card reset and/or removal to bring the driver/firmware back to normal.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | Le |
|-----------------|-------|-----|-----|-----|-----------------|---------|-----|
| Switch Protocol | FFh | C2h | 00h | 02h | Cmd Data Length | Cmd TLV | 00h |

Response Code

| Rsp Data | SW1 SW2 | Meaning |
|----------|---------|--------------------|
| Rsp TLV | 90 00h | Succeed with data. |
| -- | 90 00h | Succeed. |
| -- | 6X XXh | Fail. |

Cmd TLV

| Cmd | Meaning |
|---|---|
| Set Baud: FF 6E 03 05 01h [Baud] | Set the Baud for Part/Layer 4 to be applied during Switch Protocol. If [Baud] does not set by any previous "FF C2h ..." command, the default value is 98h (106 kbps). ISO14443: 98h (106 kbps), 99h (212 kbps), 9A (424 kbps), 9B (848 kbps). ISO15693: 80h (26 kbps), 08h (53 kbps) |
| Switch Protocol: 8F 02h [RF] [Layer] | Switch the protocol to specified RF and/or Layer. [RF]: 00h: ISO14443A, 01h: ISO14443B 02h: ISO15693, 03h: FeliCa, FFh: Current RF Other: RFU [Layer]: 02h: Layer/Part 2, 03h: Layer/Part 3, 04h: Layer/Part 4 (For A/B Only) Other: RFU Note: It must be in a Transparent Session (Disable Polling) if switching to Layer/Part 2. |

Rsp TLV

| Rsp | Meaning |
|--------------------------------|--|
| Response: 8Fh [Size] [Data] | Size: Size of Data coded in BER-TLV length field. Data: ATR (if Part 4) or Final SAK (if Type A part 3) or PI in ATQB (if Type B part 3). |

5.5.4.5.1. Switch Protocol Data Object

This command specifies the protocol and different layers of the standard.

Switch Protocol Data Object

| Tag | Length (1 byte) | Value | |
|-----|-----------------|---|--|
| | | Byte 0 | Byte 1 |
| 8Fh | 02h | 00h – ISO/IEC14443 Type A 01h – ISO/IEC14443 Type B 02h - ISO15693 03h – FeliCa Other – RFU | 02h – Switch to Layer 2 03h – Switch or activate to layer 3 04h – Activate to layer 4 Other - RFU |

5.5.4.5.2. Response Data Object

Inside the response, this command is used to notify the received data status.

Response Data Object

| Tag | Length (1 byte) | Value |
|--------|-----------------|--|
| 5F 51h | DataLen | ATR |
| 8Fh | DataLen | Final SAK (if Type A part 3) or PI in ATQB (if Type B part 3). |

5.5.4.6. PCSC 2.0 Part 3 Example

1. Start Transparent Session.
Command: **FF C2 00 00 02 81 00**
Response: **C0 03 00 90 00 90 00**
2. Turn the Antenna Field off.
Command: **FF C2 00 00 02 83 00**
Response: **C0 03 00 90 00 90 00**
3. Turn the Antenna Field on.
Command: **FF C2 00 00 02 84 00**
Response: **C0 03 00 90 00 90 00**
4. ISO 14443-4A Active.
Command: **FF C2 00 02 04 8F 02 00 04**
Response: **C0 03 01 64 01 90 00** (if no card present)
C0 03 00 90 00 5F 51 [Len] [ATR] 90 00
5. Set the PCB to 0Ah and enable the CRC, parity and protocol prologue in the transmit data.
Command: **FF C2 00 01 0A 90 02 00 00 FF 6E 03 07 01 0A**
Response: **C0 03 00 90 00 90 00**
6. Send the APDU “80B2000008” to card and get response.
Command: **FF C2 00 01 0E 5F 46 04 40 42 0F 00 95 05 80 B2 00 00 08**
Response: **C0 03 00 90 00 92 01 00 96 02 00 00 97 0C [Card Response] 90 00**
7. End Transparent Session.
Command: **FF C2 00 00 02 82 00**
Response: **C0 03 00 90 00 90 00**

5.5.5. Proprietary Pseudo APDU for PICC

The following Pseudo APDUs are provided as supplement to PCSC Pseudo APDUs to access a contactless card indirectly. The internally handling of these APDU is similar to PCSC Pseudo APDUs.

5.5.5.1. Write Value Block [FF D7 ...]

This command is used to write a 4-byte value to a block in a card compatible with MIFARE Standard. User should perform succeed authentication to get the access right of the block before sending this command.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|-------------------|-------|-----|-----|--------------|-----|-----------|
| Write Value Block | FFh | D7h | 00h | Block Number | 05h | See below |

Command Data

| Byte 0 | Byte 1 | Byte 2 | Byte 3 | Byte 4 |
|--------|------------------------------|--------|--------|--------|
| 00h | 4 Bytes Value with MSB first | | | |

Example 1: Decimal -4 = {FFh, FFh, FFh, FCh}

| VB_Value | | | |
|----------|-----|-----|-----|
| MSB | | | LSB |
| FFh | FFh | FFh | FCh |

Example 2: Decimal 1 = {00h, 00h, 00h, 01h}

| VB_Value | | | |
|----------|-----|-----|-----|
| MSB | | | LSB |
| 00h | 00h | 00h | 01h |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

5.5.5.2. Read Value Block [FF B1 ...]

This command is used to read a 4-byte value from a valid value block in a card compatible with MIFARE Standard. User should perform succeed authentication to get the access right of the block before sending this command.

Command

| Command | Class | INS | P1 | P2 | Le |
|------------------|-------|-----|-----|--------------|-----|
| Read Value Block | FFh | B1h | 00h | Block Number | 04h |

Example 1: Decimal -4 = {FFh, FFh, FFh, FCh}

| Value | | | |
|-------|-----|-----|-----|
| MSB | | | LSB |
| FFh | FFh | FFh | FCh |

Example 2: Decimal 1 = {00h, 00h, 00h, 01h}

| Value | | | |
|-------|-----|-----|-----|
| MSB | | | LSB |
| 00h | 00h | 00h | 01h |

Response

| Rsp Data | SW1 SW2 | Meaning |
|------------------------------|---------|--------------------|
| 4 Bytes Value with MSB first | 90 00h | Succeed with data. |
| -- | 6X XXh | Fail. |

5.5.5.3. Decrement/Increment Value [FF D7 ...]

This command is used to decrement/increment a 4-byte value from source block and stores the result to target block in a card compatible with MIFARE Standard. If user wants to store the result to the block same as source block, user can set the target block number equal to 0 or source block number. User should perform succeed authentication to get the access right of both source and target block before sending this command.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|---------------------------|-------|-----|---------------|---------------|-----|-----------|
| Decrement/Increment Value | FFh | D7h | Target Block# | Source Block# | 05h | See below |

Command Data

| Byte 0 | Byte 1 | Byte 2 | Byte 3 | Byte 4 |
|--------|--|--------|--------|--------|
| 01h | 4 Bytes Increment Value with MSB first | | | |
| 02h | 4 Bytes Decrement Value with MSB first | | | |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

5.5.5.4. Copy Value Block [FF D7 ...]

This command is used to copy the value from source block to target block in a card compatible with MIFARE Standard. User should perform succeed authentication to get the access right of both source and target block before sending this command.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|------------------|-------|-----|-----|---------------|-----|-----------|
| Copy Value Block | FFh | D7h | 00h | Source Block# | 02h | See below |

Command Data

| Byte 0 | Byte 1 |
|--------|---------------|
| 03h | Target Block# |

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 6X XXh | Fail. |

5.5.6. Accessing PCSC-Compliant tags (ISO14443-4)

All ISO 14443-4 compliant cards (PICCs) understand the ISO 7816-4 APDUs. The ACR1555U reader just has to communicate with the ISO 14443-4 compliant cards by exchanging ISO 7816-4 APDUs and responses. The ACR1555U will handle the ISO 14443 Parts 1-4 Protocols internally.

MIFARE Classic (1K/4K), MIFARE Mini and MIFARE Ultralight tags are supported through the T=CL emulation. Just simply treat the MIFARE tags as standard ISO 14443-4 tags. For more information, please refer to **PCSC Pseudo APDU (with Proprietary Extension) for PICC**.

ISO 7816-4 APDU Format

| Command | Class | INS | P1 | P2 | Lc | Data In | Le |
|-------------------------------|-------|-----|----|----|--------------------------|---------|---|
| ISO 7816 Part 4 Command | | | | | Length of the Data In | | Expected length of the Response Data |

ISO 7816-4 Response Format (Data + 2 bytes)

| Response | Data Out | | |
|----------|---------------|-----|-----|
| Result | Response Data | SW1 | SW2 |

Common ISO 7816-4 Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 63 00h | The operation failed. |

Typical sequence may be:

1. Present the tag and connect the PICC Interface.
2. Read/Update the memory of the tag.

To do this:

1. Connect the tag.

The ATR of the tag is 3B 88 80 01 00 00 00 00 33 81 81 00 3Ah.

In which,

The Application Data of ATQB = 00 00 00 00, protocol information of ATQB = 33 81 81. It is an ISO 14443-4 Type B tag.

2. Send an APDU, Get Challenge.

<< 00 84 00 00 08h

>> 1A F7 F3 1B CD 2B A9 58h [90 00h]

Note: For ISO 14443-4 Type A tags, the ATS can be obtained by using the APDU "FF CA 01 00 00h."

Example:

```
// Read 8 bytes from an ISO 14443-4 Type B PICC (ST19XR08E)
```

```
APDU = {80 B2 80 00 08h}
```

```
Class = 80h
```

```
INS = B2h
```

```
P1 = 80h
```

```
P2 = 00h
```

```
Lc = None
```

```
Data In = None
```

```
Le = 08h
```

```
Answer: 00 01 02 03 04 05 06 07h [$9000h]
```

5.5.7. Accessing MIFARE DESFire tags (ISO 14443-3)

MIFARE® DESFire® supports ISO 7816-4 APDU Wrapping and Native modes. Once the MIFARE® DESFire® tag is activated, the first APDU command sent to the MIFARE® DESFire® tag will determine the “Command Mode”. If the first APDU is in “Native Mode”, the rest of the APDU commands must be in “Native Mode” format. Similarly, if the first APDU is “ISO 7816-4 APDU Wrapping Mode”, the rest of the APDUs must be in “ISO 7816-4 APDU Wrapping Mode” format.

Example 1: MIFARE® DESFire® ISO 7816-4 APDU Wrapping

```
// To read 8 bytes random number from an ISO 14443-4 Type A PICC (MIFARE® DESFire®)
```

```
APDU = {90 0A 00 00 01 00 00}
```

```
Class = 90h; INS = 0Ah (MIFARE DESFire Instruction); P1 = 00h; P2 = 00h
```

```
Lc = 01h; Data In = 00h; Le = 00h (Le = 00h for maximum length)
```

```
Answer: 7B 18 92 9D 9A 25 05 21 [$91AF]
```

Status Code {91 AF} is defined in the MIFARE® DESFire® specification. Please refer to the MIFARE® DESFire® specification for more details.

Example 2: MIFARE® DESFire® Frame Level Chaining (ISO 7816 wrapping mode)

```
// In this example, the application has to do the “Frame Level Chaining”.
```

```
// To get the version of the MIFARE® DESFire® card.
```

```
Step 1: Send an APDU {90 60 00 00 00} to get the first frame. INS=60h
```

```
Answer: 04 01 01 00 02 18 05 91 AF [$91AF]
```

```
Step 2: Send an APDU {90 AF 00 00 00} to get the second frame. INS=AFh
```

Answer: 04 01 01 00 06 18 05 91 AF [\$91AF]

Step 3: Send an APDU {90 AF 00 00 00} to get the last frame. INS=AFh

Answer: 04 52 5A 19 B2 1B 80 8E 36 54 4D 40 26 04 91 00 [\$9100]

5.5.8. Accessing FeliCa tags

For FeliCa access, the command is different from the one used in PCSC-compliant and MIFARE tags. The command follows the FeliCa specification with an added header.

FeliCa Command Format

| Command | Class | INS | P1 | P2 | Lc | Data In |
|----------------|-------|-----|-----|-----|-----------------------|---|
| FeliCa Command | FFh | 00h | 00h | 00h | Length of the Data In | FeliCa Command (start with Length Byte) |

FeliCa Response Format (Data + 2 bytes)

| Response | Data Out |
|----------|---------------|
| Result | Response Data |

Read Memory Block Example:

1. Connect the FeliCa.

The ATR = 3B 8F 80 01 80 4F 0C A0 00 00 03 06 **11 00 3B** 00 00 00 00 42h

In which, **11 00 3Bh** = FeliCa

2. Read FeliCa IDM.

CMD = FF CA 00 00 00h

RES = [IDM (8bytes)] 90 00h

e.g., FeliCa IDM = 01 01 06 01 CB 09 57 03h

3. FeliCa command access.

Example: "Read" Memory Block.

CMD = FF 00 00 00 10 10 06 **01 01 06 01 CB 09 57 03** 01 09 01 01 80 00h

where:

Felica Command = 10 06 **01 01 06 01 CB 09 57 03** 01 09 01 01 80 00h

IDM = **01 01 06 01 CB 09 57 03h**

RES = Memory Block Data

5.5.8. Accessing ISO15693 tags

This section shows the option commands for ISO15693.

5.5.8.1. Read Single Block

This command retrieves one data block from the ISO15693 tag.

Command:

| Command | Class | INS | P1 | P2 | LC | Data | | Le |
|-------------------|-------|-----|-----|-----|-----|------|--------------|--------|
| Read Single Block | FFh | FBh | 00h | 00h | 02h | 20h | Block Number | --/00h |

Where:

Block Number 1 byte.
The data block number.

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

```
//Read NXP ICODE SLI card block 10 data
Command: = { FF FB 00 00 02 20 10 }
Response: = { XX XX XX XX 90 00 }
```

5.5.8.2. Write Single Block

This command write one data block to the ISO15693 tag.

Command:

| Command | Class | INS | P1 | P2 | LC | Data | | | Le |
|--------------------|-------|-----|-----|-----|------|------|--------------|------------|--------|
| Write Single Block | FFh | FBh | 00h | 00h | N+2h | 21h | Block Number | Block Data | --/00h |

Where:

Block Number 1 byte.
The data block number.

Block Data N bytes.
The data write to the block

LC

1 byte.

Base on the length of block + 2

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

//Write NXP ICODE SLI card block 10 data

Command: = { FF FB 00 00 06 21 10 11 12 13 14 }

Response: = { 90 00 }

5.5.8.3. Read Multiple Blocks

This command retrieves data blocks from the ISO15693 tag.

Command:

| Command | Class | INS | P1 | P2 | LC | Data | Le |
|----------------------|-------|-----|-----|-----|-----|---------------------------|----------------------------|
| Read Multiple Blocks | FFh | FBh | 00h | 00h | 03h | 23h First Block Number | Number of Blocks --/00h |

Where:

First Block Number

1 byte.

The starting data block number.

Number of Blocks

1 byte.

The number of blocks in the request is **one less** than the number of block security status that the tags will return in its response.

Number of Blocks = The number of blocks in the request - 1

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

//Get multiple blocks security status from 0x10 to 0x12. 0x03 consecutive blocks of NXP ICODE SLI card.

Command: = { FF FB 00 00 03 23 10 02 }

Response: = { XX XX XX XX XX XX XX XX XX XX XX 90 00 }

5.5.8.4. Write Multiple Blocks

This command write data blocks to the ISO15693 tag.

Command:

| Command | Class | INS | P1 | P2 | LC | Data | | | Le | |
|-----------------------|-------|-----|-----|-----|------|------|--------------------|------------------|------------|--------|
| Write Multiple Blocks | FFh | FBh | 00h | 00h | N+3h | 24h | First Block Number | Number of Blocks | Block Data | --/00h |

Where:

First Block Number

1 byte.

The starting data block number.

Number of Blocks

1 byte.

The number of blocks in the request is **one less** than the number of block security status that the tags will return in its response.

Number of Blocks = The number of blocks in the request - 1

Block Data

N bytes.

The data write to the blocks

LC

1 byte.

Base on the length of block data + 3

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

5.5.8.5. Lock Block

The Lock block command will lock permanently the requested block and report the success of the operation in the response

Command:

| Command | Class | INS | P1 | P2 | LC | Data | Le |
|-------------|-------|-----|-----|-----|-----|---------------------|--------|
| Lock Blocks | FFh | FBh | 00h | 00h | 02h | 22h Block Number | --/00h |

Where:

Block Number

1 byte.

The data block number.

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

Command: = { FF FB 00 00 02 22 10 }

Response: = { 90 00 }

5.5.8.6. Get System Information

The Get System Information command will send back the system information form the tag.

Command:

| Command | Class | INS | P1 | P2 | LC | Data | Le |
|------------------------|-------|-----|-----|-----|-----|------|--------|
| Get System Information | FFh | FBh | 00h | 00h | 01h | 2Bh | --/00h |

Get System Information Response Format

| Response | Data Out | | | | | | | |
|----------|------------|-----|-------|-----|-------------|--------------|-----|-----|
| Result | Info Flags | UID | DSFID | AFI | Memory Size | IC Reference | SW1 | SW2 |

Where:

Info Flags - 1 Byte

| Bit | Value | Description |
|----------|-------|--------------------------|
| Bit 0 | 0 | DSFID not present |
| | 1 | DSFID present |
| Bit 1 | 0 | AFI not present |
| | 1 | AFI present |
| Bit 2 | 0 | Memory size not present |
| | 1 | Memory size present |
| Bit 3 | 0 | IC reference not present |
| | 1 | IC reference present |
| Bit 4 ~7 | 0 | RFU |

UID - 8 Byte

DSFID - 1 Byte

AFI - 1 Byte

Memory Size - 2 Byte

| Byte | Description |
|------|--|
| 0 | Number of blocks - 1 (The actual Number of blocks = Number of blocks + 1) |
| 1 | Block size in Bytes - 1 (The actual block size = Block size in Bytes +1) |

IC Reference - 1 Byte

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

Command: = { FF FB 00 00 01 2B }

Response: = { XX XX XX XX XX XX XX XX XX XX XX XX XX XX 90 00 }

5.5.8.7. Get Multiple Blocks Security Status

The Get Multiple blocks Security Status will send back the block security status

Command:

| Command | Class | INS | P1 | P2 | LC | Data | | Le |
|-------------------------------------|-------|-----|-----|-----|-----|------|--|--------|
| Get Multiple Blocks Security Status | FFh | FBh | 00h | 00h | 03h | 2Ch | First Block Number Number of Blocks | --/00h |

Where:

First Block Number

1 byte.

The starting data block number.

Number of Blocks

1 byte.

The number of data block security status will be read. The number of blocks in the request is one less than the number of block security status that the tags will return in its response.

Number of Blocks = The number of blocks in the request - 1

Get System Information Response Format

| Response | Data Out | | |
|----------|-----------------------|-----|-----|
| Result | Block Security Status | SW1 | SW2 |

Where:

Block Security Status

Each block for 1 byte.

00h: Unlocked

01h: Locked

Response Code

| Results | SW1 SW2 | Meaning |
|---------|---------|---|
| Success | 90 00h | The operation was completed successfully. |
| Error | 64 XXh | Fail. XX is the error code from the tag |

Examples:

//Get multiple blocks security status from 0x10 to 0x12. 0x03 consecutive blocks.

Command: = { FF FB 00 00 03 2C 10 02 }

Response: = { XX XX XX 90 00 }

5.5.9. Supported PICC ATR

The following PICC type/technology are supported by default. The following ATR is returned to CCID Host on PC_to_RDR_lccPowerOn Command if the card is presented to the reader.

| Card Type/Technology | ATR |
|---|---|
| MIFARE Std 1k6 | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 01 00 00 00 00 6A |
| MIFARE Std 4k6 | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 02 00 00 00 00 69 |
| MIFARE UltraLight6 | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 03 00 00 00 00 68 |
| MIFARE Plus SL1 2k6 | Default: Same as MIFARE Std 1k Alternated: 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 36 00 00 00 00 5D |
| MIFARE Plus SL1 4k6 | Default: Same as MIFARE Std 4k Alternated: 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 37 00 00 00 00 5C |
| MIFARE Plus SL2 2k | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 38 00 00 00 00 53 |
| MIFARE Plus SL2 4k | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 39 00 00 00 00 52 |
| MIFARE UltraLight C6 | Default: 3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 3A 00 00 00 00 51 Alternated: Same as MIFARE UltraLight |
| SmartMX with MIFARE Std 1k Emulation6 | Default: Same as MIFARE Std 1k Alternated: Same as ISO14443-4, Type A |
| SmartMX with MIFARE Std 4k Emulation ⁶ | Default: Same as MIFARE Std 4k Alternated: Same as ISO14443-4, Type A |
| ISO14443-4, Type A | 3B 8n 80 01 T1 .. Tn Tck n = Number of Historical bytes in ATS T1 .. Tn = Historical bytes in ATS Tck = XOR of 8n 80 01 T1 .. Tn |
| ISO14443-4, Type B | 3B 88 80 01 T1 .. T8 Tck T1 .. T4 = Application Data in ATQB T5 .. T7 = Protocol Info in ATQB T8 = MBLI in ATA Tck = XOR of 88 80 01 T1 .. T8 |
| FeliCa | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 11 00 3B 00 00 00 00 42 |
| ISO15693-3 Generic | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 0B 00 00 00 00 00 63 |
| Infineon My-D Vicinity (SRF55Vxxx) | 3B 8F 80 01 80 4F 0C A0 00 00 03 06 0B 00 0E 00 00 00 00 6D |

6.0. Escape Command

Escape Command is send by PC_to_RDR_Escape (corresponding to SCardControl() with SCARD_CTL_CODE(3500) in PCSC API. . After the command processing, the Reader will send back the response by RDR_to_PC_Escape Message.

The following commands are provided to configure PCD/NFC and to access special function of the reader. CCID Host could send these commands to reader by using CCID Message PC_to_RDR_Escape (corresponding to SCardControl() with SCARD_CTL_CODE(3500) in PCSC API). After receiving of an Escape Command, it will be interpreted to perform various operations and then generate a response to send back to CCID Host.

Note:

Should send these commands under correct interface. For example, E0 00 00 25 01 00 (Section 6.1.1) should send through PICC interface (Section 6.0).

6.1. Escape Command for PICC

6.1.1. RF Control [E0 00 00 25 01 ...]

This command is used to set the RF control.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|------------|-------|-----|-----|-----|-----|-----------|
| RF Control | E0h | 00h | 00h | 25h | 01h | RF status |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-----------|
| Result | E1h | 00h | 00h | 00h | 01h | RF status |

RF Status: 1 Byte

| RF status | Description |
|-----------|------------------------|
| 00h | RF Off |
| 01h | RF On, with Polling |
| 02h | RF On, without Polling |

Default Setting – 01h (RF On, with Polling)

6.1.2. Get PCD/PICC Status [E0 00 00 25 00]

This command is used to get the PCD/PICC status

Command

| Command | Class | INS | P1 | P2 | Le |
|---------------------|-------|-----|-----|-----|-----|
| Get PCD/PICC Status | E0h | 00h | 00h | 25h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Get PCD/PICC Status |

PCD/PICC Status: 1 Byte

| RF status | Description |
|-----------|-------------------------|
| 00h | RF Off |
| 01h | No PICC |
| 02h | PICC Ready |
| 03h | PICC Selected/Activated |
| FFh | Error |

6.1.3. Get Polling/ATR Option [E0 00 00 23 00]

This command is used to set/get the Polling Option but save the setting without another command. This command should only be used for initial reader configuration.

Command

| Command | Class | INS | P1 | P2 | Le |
|------------------------|-------|-----|-----|-----|-----|
| Get Polling/ATR Option | E0h | 00h | 00h | 23h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------------|
| Result | E1h | 00h | 00h | 03h | 01h | PICC Polling/ATR Option |

6.1.4. Set Polling/ATR Option [E0 00 00 23 01 ...]

This command is used to set the polling option.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|------------------------|-------|-----|-----|-----|-----|-------------------------|
| Set Polling/ATR Option | E0h | 00h | 00h | 23h | 01h | PICC Polling/ATR Option |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------------|
| Result | E1h | 00h | 00h | 00h | 01h | PICC Polling/ATR Option |

PICC Polling/ATR Option - 1 Byte

| Operating Parameter | Parameter | Description | Option |
|---------------------|------------------------|---|------------------------|
| Bit 0 | Enable Polling | The Tag Types to be detected during PICC Polling. | 1 = Detect 0 = Skip |
| Bit 1 | Enable RF Off Interval | | |
| Bit 2 | | RFU | |

| Operating Parameter | Parameter | Description | Option |
|---------------------|--|---|------------------------|
| Bit 3 | Enable extra MIFARE type identification for Part 3 card in ATR | The Tag Types to be detected during PICC Polling. | 1 = Detect 0 = Skip |
| Bit 4 ~ 5 | RF Off Interval | | See below |
| Bit 6 | RFU | | |
| Bit 7 | Enable Part 4 ATR for SmartMX/JCOS card with MIFARE emulation | The Tag Types to be detected during PICC Polling. | 1 = Detect 0 = Skip |

RF Off Interval – 2 Bit **Case 1:** Disabled RF Off Interval (Bit 1 = 0)

| Operating Parameter | | USB Active (D0) |
|---------------------|-------|-----------------|
| Bit 5 | Bit 4 | |
| 0 | 0 | No RF Off |
| 0 | 1 | |
| 1 | 0 | |
| 1 | 1 | |

Case 2: Enabled RF Off Interval (Bit 1 = 1)

| Operating Parameter | | USB Active (D0) |
|---------------------|-------|-----------------|
| Bit 5 | Bit 4 | |
| 0 | 0 | 250 ms |
| 0 | 1 | 500 ms |
| 1 | 0 | 1000 ms |
| 1 | 1 | 2500 ms |

Default Setting – 8Bh (Enabled Polling, Enabled RF Off, Enabled extra MIFARE type identification for Part 3 card in ATR, RF Off Interval[00], Enabled Part 4 ATR for SmartMX/JCOS card with MIFARE emulation)

6.1.5. Get PICC Polling Type [E0 00 01 20 00]

This command is used to get the allowed Technology/Polling Type but save the setting without another command. This command should only be used for initial reader configuration.

Command

| Command | Class | INS | P1 | P2 | Le |
|-----------------------|-------|-----|-----|-----|-----|
| Get PICC Polling Type | E0h | 00h | 01h | 20h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------|
| Result | E1h | 00h | 00h | 00h | 02h | PICC Polling Type |

6.1.6. Set PICC Polling Type [E0 00 01 20 02 ...]

This command is used to set the PICC polling type.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out | |
|-----------------------|-------|-----|-----|-----|-----|-------------------|--------|
| | | | | | | Byte 1 | Byte 0 |
| Set PICC Polling Type | E0h | 00h | 01h | 20h | 02h | PICC Polling Type | |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|-------------------|--------|
| | | | | | | Byte 1 | Byte 0 |
| Result | E1h | 00h | 00h | 00h | 02h | PICC Polling Type | |

PICC Polling Type - 2 Byte, Bit Mask of following

| Bytes | Operating Parameter | Parameter | Description | Option |
|--------|---------------------|----------------------|---|------------------------|
| Byte 1 | Bit 0 | ISO 14443A | The Tag Types to be detected during PICC Polling. RFU bit should be set to 0. | 1 = Detect 0 = Skip |
| | Bit 1 | ISO 14443B | | |
| | Bit 2 | FeliCa | | |
| | Bit 3 | RFU | | |
| | Bit 4 | Topaz | | |
| | Bit 5 | Innovatron | | |
| | Bit 6 | SRI/SRIX | | |
| Bit 7 | RFU | | | |
| Byte 0 | Bit 0 | Picopass (ISO14443B) | | |
| | Bit 1 | Picopass (ISO15693) | | |
| | Bit 2 | ISO15693 | | |
| | Bit 3 | CTS | | |
| | Bit 4-7 | RFU | | |

Default Setting – Byte 1: 07h (ISO14443A, ISO14443B, FeliCa)

Byte 0: 05h (Picopass (ISO14443B), ISO15693)

Example:

Command: E0 00 01 20 02 07 05

Response: E1 00 00 00 02 07 05

Polling Type: Byte 1 = 07h = 0000 0111b = ISO14443A, ISO14443B, FeliCa

Byte 0 = 05h = 0000 0101b = Picopass (ISO14443B), ISO15693

6.1.7. Get Auto PPS [E0 00 00 24 00]

Whenever a PICC is recognized, the reader will try to change the communication speed between the PCD and PICC as defined by the maximum connection speed. If the card does not support the proposed connection speed, the reader will try to connect the card with a slower speed setting.

Command

| Command | Class | INS | P1 | P2 | Le |
|--------------|-------|-----|-----|-----|-----|
| Get Auto PPS | E0h | 00h | 00h | 24h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|-----------|---------------|
| Result | E1h | 00h | 00h | 00h | 02h | Max Speed | Current Speed |

6.1.8. Set Auto PPS [E0 00 00 24 01 ...]

This command is used to set the auto PPS.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|--------------|-------|-----|-----|-----|-----|-----------|
| Set Auto PPS | E0h | 00h | 00h | 24h | 01h | Max Speed |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|-----------|---------------|
| Result | E1h | 00h | 00h | 00h | 02h | Max Speed | Current Speed |

Speed of PPS

| Speed | Description |
|-------|--------------------------------|
| 00h | 106 kbps; equal to No Auto PPS |
| 01h | 212 kbps |
| 02h | 424 kbps |
| 03h | 848 kbps |

Default Setting – 02h (424 kbps)

Notes:

1. Normally, the application should know the maximum connection speed of the PICCs being used. The environment also affects the maximum achievable speed. The reader just uses the proposed communication speed to talk with the PICC. The PICC will become inaccessible if the PICC or environment does not meet the requirement of the proposed communication speed.
2. If the higher speed setting affects the performance of the reader, please switch back to a lower speed setting.

6.1.9. Read PICC Type [E0 00 00 35 00]

This command is used to read the PICC type.

command

| Command | Class | INS | P1 | P2 | Le |
|---------------|-------|-----|-----|-----|-----|
| Get PICC Type | E0h | 00h | 00h | 35h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|---------|--------|
| Result | E1h | 00h | 00h | 00h | 02h | Type | Status |

Type: 1 Byte

| Type | Description |
|------|----------------|
| CCh | No PICC |
| 04h | Topaz |
| 10h | MIFARE |
| 11h | FeliCa |
| 20h | Type A, Part 4 |
| 23h | Type B, Part 4 |
| 25h | Innovatron |
| 28h | SRIX |
| 30h | PicoPass |
| FFh | Other |

Status: 1 Byte

| Status | Description |
|--------|-------------------------|
| 00h | RF Off |
| 01h | No PICC |
| 02h | PICC Ready |
| 03h | PICC Selected/Activated |
| FFh | Error |

6.1.10. Escape Command for PICC – HID Keyboard

6.1.10.1. Get Output Format [E0 00 00 90 00]

This command is used to get output format.

Command

| Command | Class | INS | P1 | P2 | Le |
|-------------------|-------|-----|-----|-----|-----|
| Get Output Format | E0h | 00h | 00h | 90h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|---------------|--------------|
| Result | E1h | 00h | 00h | 00h | 02h | Output Format | Output Order |

6.1.10.2. Set Output Format [E0 00 00 90 02 ...]

This command is used to set output format.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out | |
|-------------------|-------|-----|-----|-----|-----|---------------|--------------|
| Set Output Format | E0h | 00h | 00h | 90h | 02h | Output Format | Output Order |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|---------------|--------------|
| Result | E1h | 00h | 00h | 00h | 02h | Output Format | Output Order |

Output Format: 1 Byte

| Operating Parameter | Parameter | Description | Option |
|---------------------|--------------|---|------------------------|
| Bit 7 ~ 4 | Letter Case | The Tag Types to be detected during PICC Polling. | 1 = Detect 0 = Skip |
| Bit 3 ~ 0 | Display Mode | | |

Output Order: 1 Byte

| Status | Description |
|--------|--|
| 00h | Default order (UID Byte 0, UID Byte 1 ... UID Byte N) Example: aa cc bb dd (original /actual UID order) |
| 01h | Reverse order (UID Byte N, UID Byte N-1 ... UID Byte 0) Example: dd bb cc aa (reverse the UID order) |

Letter Case: Upper 4 Bits (Bit 7 ~ 4)

| Status (From bit 7~4) | Description (Don't care about x bit) |
|-----------------------|--------------------------------------|
| 1xxx | Reserved |
| 00x0 | Lowercase |
| 00x1 | Uppercase |
| 000x | Only Support 4 bytes UID |
| 001x | Support 4, 7, 8, 10 bytes UID |

Display Mode: Lower 4 Bits (Bit 3 ~ 0)

| Status (From bit 7~4) | Description (Don't care about x bit) |
|-----------------------|--------------------------------------|
| 0h | Hex |
| 1h | Dec (byte by byte) |
| 2h | Dec |
| 3h | 6H-6H |
| 4h | 8H-8H |
| 5h | 10H-10H |
| 6h | 14H-14H |
| 7h | 20H-20H |
| 8h | 6H-8D |
| 9h | 6H-10D |
| Ah | 8H-10D |
| Bh | 10H-14D |
| Ch | 2H4H-8D |
| Dh | 14H-17D |

6.1.10.3. Get Character at Start, Between, at End UID [E0 00 00 91 00]

This command is used to get character at Start, Between, End UID.

Command

| Command | Class | INS | P1 | P2 | Le |
|----------------------|-------|-----|-----|-----|-----|
| Get Character of UID | E0h | 00h | 00h | 91h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | | |
|----------|-------|-----|-----|-----|-----|---------|-----|-------|
| Result | E1h | 00h | 00h | 00h | 03h | Between | End | Start |

6.1.10.4. Set Character at Start, Between, at End UID [E0 00 00 91 03 ...]

This command is used to set character at Start, Between, End UID.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out | | |
|----------------------|-------|-----|-----|-----|-----|----------|-----|-------|
| Set Character of UID | E0h | 00h | 00h | 91h | 03h | Between | End | Start |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | | |
|----------|-------|-----|-----|-----|-----|---------|-----|-------|
| Result | E1h | 00h | 00h | 00h | 03h | Between | End | Start |

Between: 1 Byte (The character between each UID)

| Status | Description |
|--------|--|
| FFh | No character in between |
| Other | Refer to Universal Serial Bus (USB) HID Usage Tables |

End: 1 Byte (The character at the end of output)

| Status | Description |
|--------|--|
| FFh | No character in between |
| Other | Refer to Universal Serial Bus (USB) HID Usage Tables |

Start: 1 Byte (The character at the start of output)

| Status | Description |
|--------|--|
| FFh | No character in between |
| Other | Refer to Universal Serial Bus (USB) HID Usage Tables |

Notes:

- only the characters “;” “,” “.” “/” “-” are supported in the AZERTY keyboard layout for the characters in between. Zero (0) and Backspace are NOT supported.

6.1.10.5. Get Keyboard Layout Language [E0 00 00 92 00]

This command is used to get keyboard layout language.

Command

| Command | Class | INS | P1 | P2 | Le |
|------------------------------|-------|-----|-----|-----|-----|
| Get Keyboard Layout Language | E0h | 00h | 00h | 92h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|--------------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Keyboard Layout Language |

6.1.10.6. Set Keyboard Layout Language [E0 00 00 92 01 ...]

This command is used to set keyboard layout language.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|------------------------------|-------|-----|-----|-----|-----|--------------------------|
| Set Keyboard Layout Language | E0h | 00h | 00h | 92h | 01h | Keyboard Layout Language |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|--------------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Keyboard Layout Language |

Keyboard Layout Language: 1 Byte

| Status | Description |
|--------|-------------|
| 00h | English |
| 01h | French |
| 02h | Reserved |
| 03h | Lithuanian |

6.1.10.7. Get Host Interface [E0 00 00 93 00]

This command is used to get host interface

Command

| Command | Class | INS | P1 | P2 | Le |
|--------------------|-------|-----|-----|-----|-----|
| Get Host Interface | E0h | 00h | 00h | 93h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|----------------|
| Result | E1h | 00h | 00h | 00h | 01h | Host Interface |

6.1.10.8. Set Host Interface [E0 00 00 93 01 ...]

This command is used to set host interface.

Notice: The reader would automatically power off to apply the setting.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|--------------------|-------|-----|-----|-----|-----|----------------|
| Set Host Interface | E0h | 00h | 00h | 93h | 01h | Host Interface |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|----------------|
| Result | E1h | 00h | 00h | 00h | 01h | Host Interface |

Host Interface: 1 Byte

| Status | Description |
|--------|-------------------|
| 00h | Only HID Keyboard |
| 01h | Only CCID Reader |

Default Setting – 01h (Only CCID Reader)

6.1.11. Escape Command for PICC – Card Emulation

6.1.11.1. Enter Card Emulation Mode [E0 00 00 40 03 ...]

This command is used to set the reader into card emulation mode in order to emulate a MIFARE Ultralight or a FeliCa Card.

Note: Lock byte is not supported in emulated MIFARE Ultralight. UID is user programmable.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out | | |
|---------------------------|-------|-----|---------------------------------|-----|-----|----------|-----|-----|
| Enter Card Emulation Mode | E0h | 00h | 00h: Temperate 01h: Permeate | 40h | 03h | NFC Mode | 00h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|----------|
| Result | E1h | 00h | 00h | 00h | 03h | NFC Mode |

NFC Device Mode: 3 Byte

| Status | Description |
|--------|---------------------------|
| 02h | NFC Forum Type 2 Tag Mode |
| 03h | FeliCa |
| Other | Card Read/Write Mode |

Note: Please enter to Card Read/Write mode before switching to different card emulation mode. The response will be showed after the Card Emulation Mode initial is done.

| Byte Number | 0 | 1 | 2 | 3 | Byte Address access by USB |
|-----------------|----------|----------|----------|----------|----------------------------|

| Data read/write | Block 8 | 128-143 |
| Data read/write | Block 9 | 144-159 |

Table 15: FeliCa Memory Map (160 bytes)

Where:

Default: Block 0 data: {10h, 01h, 01h, 00h, 09h, 00h, 00h, 00h, 00h, 00h, 01h, 00h, 00h, 00h, 00h, 1Ch}

Default Block 0 data NFC Type3 Tag Attribute Information Block

Notes:

1. FeliCa card emulation support Read/Write without Encryption
2. FeliCa Card Identification Number in IDm is user programmable while Manufacturer Code is fixed at (03 88).

6.1.11.2. Read Card Emulation Data (NFC Forum Type 2 Tag) [E0 00 00 60 04 ...]

This command is used to read the emulated card content.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | | | |
|--------------------------|-------|-----|-----|-----|-----|---------|----------|--------------|--------|
| Read Card Emulation Data | E0h | 00h | 00h | 60h | 04h | 00h | NFC Mode | Start Offset | Length |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|--------|---------|
| Result | E1h | 00h | 00h | 00h | Length | Data |

Start Offset: 1 Byte – Address start from Data0 in **Table 14**

Length: 1 Byte – No. of byte

6.1.11.3. Write Card Emulation Data (NFC Forum Type 2 Tag) [E0 00 00 60 ...]

This command is used to write the emulated card content.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | | | | |
|---------------------------|-------|-----|-----|-----|--------------|---------|----------|--------------|--------|------|
| Write Card Emulation Data | E0h | 00h | 00h | 60h | Length + 04h | 01h | NFC Mode | Start Offset | Length | Data |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | | | | |
|----------|-------|-----|-----|-----|-----|---------|-----|-----|--|--|
| Result | E1h | 00h | 00h | 00h | 03h | Length | 90h | 00h | | |

NFC Device Mode: 1 Byte

| Status | Description |
|--------|---------------------------|
| 02h | NFC Forum Type 2 Tag Mode |
| 03h | FeliCa |
| Other | Card Read/Write Mode |

Start Offset: 1 Byte – Address start from Data0 in **Table 14**

Length: 1 Byte – No. of byte

6.1.11.4. Read Card Emulation Data (NFC Forum Type 2 Tag) (Extended)

This command is used to read the emulated card content.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | | | | |
|--------------------------|-------|-----|-----|-----|-----|---------|----------|------------------------|-----------------------|--------|
| Read Card Emulation Data | E0h | 00h | 01h | 60h | 05h | 00h | NFC Mode | Start Offset Bit[15:8] | Start Offset Bit[7:0] | Length |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | | | | |
|----------|-------|-----|-----|-----|--------|---------|--|--|--|--|
| Result | E1h | 00h | 00h | 00h | Length | Data | | | | |

Start Offset: 2 Byte – Address start to read from SN0 in **Table 14**

Length: 1 Byte – No. of byte to read

6.1.11.5. Write Card Emulation Data (NFC Forum Type 2 Tag) (Extended)

This command is used to write the emulated card content.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In | | | | | |
|---------------------------|-------|-----|-----|-----|--------------|---------|----------|------------------------|-----------------------|--------|------|
| Write Card Emulation Data | E0h | 00h | 01h | 60h | Length + 05h | 01h | NFC Mode | Start Offset Bit[15:8] | Start Offset Bit[7:0] | Length | Data |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | | |
|----------|-------|-----|-----|-----|-----|---------|-----|-----|
| Result | E1h | 00h | 00h | 00h | 03h | Length | 90h | 00h |

NFC Device Mode: 1 Byte

| Status | Description |
|--------|---------------------------|
| 02h | NFC Forum Type 2 Tag Mode |
| Other | Card Read/Write Mode |

Start Offset: 2 Byte – Address start to write from SN0 in **Table 14**

Length: 1 Byte – No. of byte to write

6.1.11.6. Set Card Emulation of NFC Forum Type 2 Tag ID [E0 00 00 61 03 ...]

This command sets the UID of the emulated MIFARE Ultralight card.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|------------------------------|-------|-----|-----|-----|-----|-------------|
| Set Card Emulation Lock Data | E0h | 00h | 00h | 61h | 03h | 3 bytes UID |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In | |
|----------|-------|-----|-----|-----|-----|---------|-----|
| Result | E1h | 00h | 00h | 00h | 02h | 90h | 00h |

6.1.11.7. Set Card Emulation Lock Data in NFC [E0 00 00 65 01 ...]

This command sets the lock for card emulation data in NFC communication. If the data is locked, it is protected from being overwritten via NFC.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|------------------------------|-------|-----|-----|-----|-----|---------|
| Set Card Emulation Lock Data | E0h | 00h | 00h | 65h | 01h | Lock |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 01h | Lock |

Lock: 1 Byte – Protect the data from being overwritten via NFC

| Operating Parameter | Parameter | Description | Option |
|---------------------|-----------------------------|--|-----------------------------------|
| Bit 7 ~ 2 | Reserved | Reserved | |
| Bit 1 | FeliCa Lock Enable | Data cannot be modified via NFC. The data can still be modified by using the USB escape command. | 0: Lock disable 1: Lock enable |
| Bit 0 | NFC Forum Type 2 Tag Enable | | |

6.1.11.8. Set Card Emulation FeliCa IDm [E0 00 00 64 06 ...]

This command sets the 6-byte FeliCa Card Identification number on emulated FeliCa card.

Command

| Command | Class | INS | P1 | P2 | Lc | Data In |
|-------------------------------|-------|-----|-----|-----|-----|---------|
| Set Card Emulation FeliCa IDm | E0h | 00h | 00h | 64h | 06h | IDm |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data Out |
|----------|-------|-----|-----|-----|-----|----------|
| Result | E1h | 00h | 00h | 00h | 06h | IDm |

Where:

IDm 6 bytes.

6.1.11.9. Get Card Emulation Status [E0 00 00 69 00]

This command is used to get the status of card emulation data in NFC communication.

Command

| Command | Class | INS | P1 | P2 | Lc |
|---------------------------|-------|-----|-----|-----|-----|
| Get Card Emulation Status | E0h | 00h | 00h | 69h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 01h | Status |

Status: 1 Byte

| Operating Parameter | Mode | Description |
|---------------------|---------------------------|-----------------------|
| Bit 7 ~ 6 | Reserved | Reserved |
| Bit 5 | EmulatedCard is activated | 1 = Activated |
| Bit 4 | EmulatedCard is removed | 1 = Card is removed |
| Bit 3 | EmulatedCard is read all | 1 = All data is read |
| Bit 2 | EmulatedCard is read | 1 = Data is read |
| Bit 1 | EmulatedCard is written | 1 = Data is written |
| Bit 0 | EmulatedCard is detected | 1 = Card is detecting |

6.1.11.10. Example Command Set of Emulating NFC Forum Type 2 Tag Mode

The command set is to trigger ACS website <https://www.acs.com.hk> by using ACR1555U to emulate as the NFC forum type 2 tag mode. The steps are showed below:

1. Enter the card emulation mode with below command:
 - Send Enter Card Emulation Mode
E0 00 00 40 03 02 00 00
2. Write the NDEF data with below command:
 - Send Write Card Emulation Data (NFC Forum Type 2 Tag)
E0 00 00 60 1A 01 02 00 16 E1 10 F4 00 03 0F D1 01 0B 55 02 61 63 73 2E 63 6F 6D 2E 68 6B FE

The command set is to trigger an sample long URL website

<https://www.example.com/this/is/a/very/long/url/that/keeps/going/on/and/on/with/even/more/segments/added/to/make/sure/it/exceeds/the/typical/length/limit/of/260/bytes/which/is/surprisingly/easy/to/do/if/you/keep/adding/more/and/more/segments/like/this/one/and/even/more>

by using ACR1552U to emulate as the NFC forum type 2 tag mode. The steps are showed below:

1. Enter the card emulation mode with below command:
 - Send Enter Card Emulation Mode
E0 00 00 40 03 02 00 00
2. Write the NDEF data with below command:
 - Send Write Card Emulation Data (NFC Forum Type 2 Tag). Since the length of the NDEF message is longer than 256 bytes, it needs to be spilt into two parts to send to the NFC Forum Type 2 Tag.
E0 00 00 60 AC 01 02 00 A8 E1 10 F4 00 03 FF 01 09 C1 01 00 00 01 02 55 02 65 78 61 6D 70 6C 65 2E 63 6F 6D 2F 74 68 69 73 2F 69 73 2F 61 2F 76 65 72 79 2F 6C 6F 6E 67 2F 75 72 6C 2F 74 68 61 74 2F 6B 65 65 70 73 2F 67 6F 69 6E 67 2F 6F 6E 2F 61 6E 64 2F 6F 6E 2F 77 69 74 68 2F 65 76 65 6E 2F 6D 6F 72 65 2F 73 65 67 6D 65 6E 74 73 2F 61 64 64 65 64 2F 74 6F 2F 6D 61 6B 65 2F 73 75 72 65 2F 69 74 2F 65 78 63 65 65 64 73 2F 74 68 65 2F 74 79 70 69 63 61 6C 2F 6C 65 6E 67 74 68 2F 6C 69 6D 69 74 2F 6F 66 2F 32 36 30 2F 62 79 74
E0 00 00 60 6E 01 02 A8 6A 65 73 2F 77 68 69 63 68 2F 69 73 2F 73 75 72 70 72 69 73 69 6E 67 6C 79 2F 65 61 73 79 2F 74 6F 2F 64 6F 2F 69 66 2F 79 6F 75 2F 6B 65 65 70 2F 61 64 64 69 6E 67 2F 6D 6F 72 65 2F 61 6E 64 2F 6D 6F 72 65 2F 73 65 67 6D 65 6E 74 73 2F 6C 69 6B 65 2F 74 68 69 73 2F 6F 6E 65 2F 61 6E 64 2F 65 76 65 6E 2F 6D 6F 72 65 FE

Notes:

For more detailed information and specifications related to the NDEF (NFC Data Exchange Format), I would recommend referring to the NDEF specification. It provides comprehensive guidelines and details about the structure and usage of NDEF records, which are commonly used in NFC data exchange. The NDEF specification will provide a deeper understanding of how to interpret and utilize the NDEF command and data in the context of the ACR1555U device.

6.2. Escape Command for ICC

6.2.1. Get Card Power Configuration [E0 00 00 0B 00]

This command is used get the ICC Card Power Configuration. This command should only be used for initial reader configuration.

Command

| Command | Class | INS | P1 | P2 | Le |
|------------------------------|-------|-----|-----|-----|-----|
| Get Card Power Configuration | E0h | 00h | 00h | 0Bh | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Card Power Config |

6.2.2. Set Card Power Configuration [E0 00 00 0B 01 ...]

This command is used set and save the ICC Card Power Configuration. This command should only be used for initial reader configuration.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|------------------------------|-------|-----|-----|-----|-----|----------|
| Set Card Power Configuration | E0h | 00h | 00h | 0Bh | 01h | Config |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Card Power Config |

Card Power Config (1 byte)

| Card Power Config | Description |
|-------------------|-------------------------------|
| 00h | Auto Detect, 1.8V -> 3V -> 5V |
| 01h | 5V Only |
| 02h | 3V Only |
| 03h | 1.8V Only |
| 04h | Auto Detect, 5V -> 3V -> 1.8V |
| Other | RFU |

Default Setting – 04h (Auto Detect, 5V -> 3V -> 1.8V)

6.3. Escape Command for Peripheral Control and Other

6.3.1. Get Firmware Version [E0 00 00 18 00]

This command is used to get reader's firmware message.

Command

| Command | Class | INS | P1 | P2 | Le |
|----------------------|-------|-----|-----|-----|-----|
| Get Firmware Version | E0h | 00h | 00h | 18h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|----------------------------|------------------|
| Result | E1h | 00h | 00h | 00h | Length of Firmware Version | Firmware Version |

Example:

Command: E0 00 00 18 00

Response Code: E1 00 00 00 12 41 43 52 31 35 35 35 20 46 57 20 31 2E 30 30 2E 30 30

Firmware Version in Hex: 41 43 52 31 35 35 35 20 46 57 20 31 2E 30 30 2E 30 30

Firmware Version in ASCII: ACR1555 FW 1.00.00

6.3.2. Get Serial Number [E0 00 00 47 00]

This command is used to get the serial number.

Command

| Command | Class | INS | P1 | P2 | Le |
|-------------------|-------|-----|-----|-----|-----|
| Get Serial Number | E0h | 00h | 00h | 47h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data out |
|----------|-------|-----|-----|-----|----------------------|------------|
| Result | E1h | 00h | 00h | 00h | Length of Serial No. | Serial No. |

6.3.3. Set S/N in USB Descriptor [E0 00 00 F0]

This command is used to Set S/N in USB Descriptor.

Command

| Command | Class | INS | P1 | P2 | Le | Data In | |
|---------------------------|-------|-----|-----|-----|-----|---------|-----------------------------|
| Set S/N in USB Descriptor | E0h | 00h | 00h | F0h | 02h | 00h | Enable SN in USB Descriptor |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data Out | | |
|----------|-------|-----|-----|-----|-----|-----------------------------|-----|-----|
| Result | E1h | 00h | 00h | 00h | 03h | Enable SN in USB Descriptor | 90h | 00h |

Enable SN in USB Descriptor (1 byte)

| Enable SN in USB Descriptor | Description |
|-----------------------------|------------------------------|
| 00h | Disable SN in USB Descriptor |
| 01h | Enable SN in USB Descriptor |

6.3.4. Set Buzzer Control - Single Time [E0 00 00 28 01 ...]

This command is used to set a single buzzer

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|----------------|-------|-----|-----|-----|-----|------------|
| Buzzer Control | E0h | 00h | 00h | 28h | 01h | BUZ Status |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|------------|
| Result | E1h | 00h | 00h | 00h | 01h | BUZ Status |

Buzzer Status (1 byte)

| Buzzer Status | Description |
|---------------|-------------------------------|
| 00h | Off |
| 01 ~ FFh | On with duration in 10ms unit |

6.3.5. Set Buzzer Control - Repeatable [E0 00 00 28 03 ...]

This command is used to set period of buzzer

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|----------------|-------|-----|-----|-----|-----|------------|
| Buzzer Control | E0h | 00h | 00h | 28h | 03h | BUZ Status |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|------------|
| Result | E1h | 00h | 00h | 00h | 03h | BUZ Status |

Buzzer Status (3 byte)

| Operating Parameter | Buzzer Status | Description |
|---------------------|--------------------|------------------------------------|
| Param 1 – Byte 0 | On Time Period | 01 ~ FF: On Duration in 10ms unit |
| Param 2 – Byte 1 | Off Time Period | 01 ~ FF: Off Duration in 10ms unit |
| Param 3 – Byte 2 | Time for Repeating | 01 ~ FF: Number to Repeat |

6.3.6. Get LED Status [E0 00 00 29 00]

This command is used to get the current LED status

Command

| Command | Class | INS | P1 | P2 | Le |
|----------------|-------|-----|-----|-----|-----|
| Get LED Status | E0h | 00h | 00h | 29h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|------------|
| Result | E1h | 00h | 00h | 00h | 01h | LED Status |

6.3.7. Set LED Control [E0 00 00 29 01 ...]

This command is used to set LED control

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|-----------------|-------|-----|-----|-----|-----|------------|
| Set LED Control | E0h | 00h | 00h | 29h | 01h | LED Status |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|------------|
| Result | E1h | 00h | 00h | 00h | 01h | LED Status |

LED Status (1 byte)

| LED Status | Description |
|-------------------|-----------------|
| Bit 0: Green LED | 1 = On; 0 = Off |
| Bit 2: Blue LED | 1 = On; 0 = Off |
| Bit 3: Yellow LED | 1 = On; 0 = Off |
| Bit 4-7: RFU | Other |

6.3.8. Get UI Behaviour [E0 00 00 21 00]

This command is used to get the PCD UI Behaviour but save the setting without another command. This command should only be used for initial reader configuration.

Command

| Command | Class | INS | P1 | P2 | Le |
|-----------------------|-------|-----|-----|-----|-----|
| Get PICC UI Behaviour | E0h | 00h | 00h | 21h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------|
| Result | E1h | 00h | 00h | 00h | 01h | PICC UI Behaviour |

6.3.9. Set UI Behaviour [E0 00 00 21 01 ...]

This command is used to set the PICC UI behaviour.

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|-----------------------|-------|-----|-----|-----|-----|-------------------|
| Set PICC UI Behaviour | E0h | 00h | 00h | 21h | 01h | PICC UI Behaviour |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------|
| Result | E1h | 00h | 00h | 00h | 01h | PICC UI Behaviour |

UI Behaviour - 1 Byte, Bit Mask of following

| Operating Parameter | Parameter | Description | Option |
|---------------------|--|--------------------------------|---------------------------|
| Bit 0 | Accessing(LED Fast Blinking) | The UI behaviour of the reader | 1 = Enable 0 = Disable |
| Bit 1 | Waiting for Presence (LED On) | | |
| Bit 2 | Presence/Activated (LED On) | | |
| Bit 3 | Presence Event (Short Buzzer Beep) | | |
| Bit 4 | Card Removal Event (Short Buzzer Beep) | | |

Default Setting For PICC – 1Fh

Notes:

1. The Get/Set UI behaviour are excluding on SAM interface

6.3.10. Get BLE UI Behaviour [E0 00 00 4B 01 05]

This command is used to set the Read the current Behaviour for LEDs

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|-----------------------|-------|-----|-----|-----|-----|----------|
| Get BLE UI Behaviours | E0h | 00h | 00h | 4Bh | 01h | 05h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------------------|
| Result | E1h | 00h | 00h | 00h | 01h | BLE and charging UI Behaviour |

6.3.11. Set BLE UI Behaviour [E0 00 00 4B 02 05 ...]

This command is used to set the Set the Behaviours for Blue BLE LED

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out (1 st byte) | Data Out |
|----------------------|-------|-----|-----|-----|-----|---------------------------------|------------------|
| Set BLE UI Behaviour | E0h | 00h | 00h | 4Bh | 02h | 05h | BLE UI Behaviour |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|------------------|
| Result | E1h | 00h | 00h | 00h | 01h | BLE UI Behaviour |

BLE UI Behaviour - 1 Byte, Bit Mask of following

| Operating Parameter | Parameter | Description | Option |
|---------------------|--------------|-------------------------------------|---------------------------|
| Bit 0 | Blue BLE LED | The LEDs will be control by reader. | 1 = Enable 0 = Disable |

Default Setting For BLE – 01h

6.3.12. Get Sleep Mode Option [E0 00 00 50 00]

This command checks the sleep mode timer.

Note: This is applicable only to firmware version 1.02.04 and later

Command

| Command | Class | INS | P1 | P2 | Lc |
|------------------------|-------|-----|-----|-----|-----|
| Get Sleep timer Option | E0h | 00h | 00h | 50h | 00h |

Response Code

| Response | CLA | INS | P1 | P2 | Le | Data In |
|----------|-----|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 01h | Time |

Where:

- Time** 1 byte: Timer
- 00h = 60s (default)
- 01h = 90s
- 02h = 120s
- 03h = 180s
- 04h = No Sleep

6.3.13. Set Sleep Mode Option [E0 00 00 48 ...]

By default, the reader will enter sleep mode if there is no operation for 60 seconds. This command sets the time interval before entering sleep mode.

Note: This is applicable only to firmware version 1.02.04 and later

Command

| Command | Class | INS | P1 | P2 | Data Out |
|--------------------|-------|-----|-----|-----|----------|
| Set Auto Power Off | E0h | 00h | 00h | 48h | Time |

Response Code

| Response | CLA | INS | P1 | P2 | Le | Data In |
|----------|-----|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 01h | Time |

Where:

- Time** 1 byte: Timer
- 00h = 60s (default)
- 01h = 90s
- 02h = 120s
- 03h = 180s
- 04h = No Sleep

6.3.14. Get Tx Power Value [E0 00 00 51 00]

This command read the Tx power of the Bluetooth.

Command

| Command | Class | INS | P1 | P2 | Lc |
|--------------------|-------|-----|-----|-----|-----|
| Get Tx power Value | E0h | 00h | 00h | 51h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|----------|
| Result | E1h | 00h | 00h | 00h | 01h | Tx Power |

6.3.15. Set Tx Power Value [E0 00 00 49 ...]

This command change the Tx power of the Bluetooth.

Command

| Command | Class | INS | P1 | P2 | Data Out |
|--------------------|-------|-----|-----|-----|----------|
| Get Tx power Value | E0h | 00h | 00h | 49h | Tx Power |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|----------|
| Result | E1h | 00h | 00h | 00h | 01h | Tx Power |

Where:

Tx Power 1 byte

00h = -23 dBm, Distance : ~3 meters

01h = -6 dBm(default), Distance : ~7 meters

02h = 0 dBm, Distance: ~17 meters

03h = 4 dBm, Distance: ~25 meters

Default Value – 01h

6.3.16. Get MAC Address [E0 00 00 43 00]

This command read the MAC address of the BLE reader

Command

| Command | Class | INS | P1 | P2 | Lc |
|-----------------|-------|-----|-----|-----|-----|
| Get MAC Address | E0h | 00h | 00h | 43h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------|
| Result | E1h | 00h | 00h | 00h | 06h | MAC address |

Where:

MAC address 6 bytes

AA:BB:CC:DD:EE:FF is in Little-Endian

BLE MAC address: FF:EE:DD:CC:BB:AA

6.3.17. Get BLE Advertising Name [E0 00 00 44 00]

This command read the BLE advertising name.

Command

| Command | Class | INS | P1 | P2 | Lc |
|--------------------------|-------|-----|-----|-----|-----|
| Get BLE Advertising Name | E0h | 00h | 00h | 44h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|--------|----------------------|
| Result | E1h | 00h | 00h | 00h | length | BLE advertising name |

6.3.18. Get Battery Level [E0 00 00 52 00]

This command checks the current battery level.

Note: This is applicable when the reader is in Bluetooth mode.

Command

| Command | Class | INS | P1 | P2 | Lc |
|-------------------|-------|-----|-----|-----|-----|
| Get Battery Level | E0h | 00h | 00h | 52h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------------|
| Result | E1h | 00h | 00h | 00h | 01h | Battery Level |

Where:

- Battery Level 1 byte
- 64h = 100% battery
- 5Ah = 90% battery
- 50h = 80% battery
- 46h = 70% battery
- 3Ch = 60% battery
- 32h = 50% battery
- 28h = 40% battery
- 1Eh = 30% battery
- 14h = 20% battery
- 0Fh = 15% battery

6.3.19. Remove BLE Bonding Record [E0 00 00 5B 00]

This command remove BLE Bonding Record .

Note: This is applicable when the reader is in USB mode

Command

| Command | Class | INS | P1 | P2 | Lc |
|---------------------------|-------|-----|-----|-----|-----|
| Remove BLE Bonding Record | E0h | 00h | 00h | 5Bh | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 02h | 90h 00h |

6.3.20. Read BLE Communication Mode [E0 00 00 77 00]

This command read the BLE communication mode.

Command

| Command | Class | INS | P1 | P2 | Lc |
|-----------------------------|-------|-----|-----|-----|-----|
| Read BLE Communication Mode | E0h | 00h | 00h | 77h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|--------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Communication Mode |

6.3.21. Set BLE Communication Mode

This command set the BLE communication mode.

Step 1, get random number:

Command

| Command | Class | INS | P1 | P2 | Lc |
|-------------------|-------|-----|-----|-----|-----|
| Get Random Number | E0h | 00h | 00h | 75h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------------|
| Result | E1h | 00h | 00h | 00h | 10h | 16 bytes random numbers |

Step 2, Set BLE communication mode:

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|----------------------------|-------|-----|-----|-----|-----|---|
| Set BLE Communication Mode | E0h | 00h | 00h | 77h | 20h | 16 bytes encrypted random numbers + 16 bytes encrypted Mode Value |

Where:

| Mode Value | |
|--------------------|---------------------------|
| Communication Mode | 15 bytes don't care value |

Response Code

| Response | CLA | INS | P1 | P2 | Le | Data In |
|----------|-----|-----|-----|-----|-----|--------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Communication Mode |

| Communication Mode | Meaning |
|--------------------|---------------|
| 00h | Plain Text |
| 01h | Authenticated |

6.3.22. Customer Master Key Rewrite

This command set the customer master key.

Step 1, get random number:

Command

| Command | Class | INS | P1 | P2 | Lc |
|-------------------|-------|-----|-----|-----|-----|
| Get Random Number | E0h | 00h | 00h | 75h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|-------------------------|
| Result | E1h | 00h | 00h | 00h | 10h | 16 bytes random numbers |

Step 2, customer master key rewrite:

Command

| Command | Class | INS | P1 | P2 | Lc | Data Out |
|-----------------------------|-------|-----|-----|-----|-----|---|
| Customer Master Key Rewrite | E0h | 00h | 00h | 76h | 20h | 16 bytes encrypted random numbers + 16 bytes encrypted New Master Key |

Response Code

| Response | CLA | INS | P1 | P2 | Le | Data In |
|----------|-----|-----|-----|-----|-----|---------|
| Result | E1h | 00h | 00h | 00h | 02h | SW1 SW2 |

| SW1 SW2 | Meaning |
|---------|---------|
| 90 00h | Success |
| 67 00h | Fail |

6.3.23. Read Authentication Error Counter [E0 00 00 72 00]

This command read the error counter of authentication.

Command

| Command | Class | INS | P1 | P2 | Lc |
|-----------------------------------|-------|-----|-----|-----|-----|
| Read Authentication Error Counter | E0h | 00h | 00h | 72h | 00h |

Response Code

| Response | Class | INS | P1 | P2 | Le | Data In |
|----------|-------|-----|-----|-----|-----|---------------------|
| Result | E1h | 00h | 00h | 00h | 01h | Error Counter Value |

Where:

Error Counter Value 1 byte

Appendix A. NDEF Message

This section shows how to use NDEF message to encode the URL onto the Ntag.

For the data format, please refer to NFC Forum NFC Data Exchange Format (NDEF) Specifications 1.0.

Example:

NDEF Message = { D1 01 0B 55 02 61 63 73 2E 63 6F 6D 2E 68 6Bh}

| Offset | Content | Length | Description |
|--------|----------------------------------|--------|--|
| 0 | D1 | 1 | NDEF header. TNF = 01h, SR=1, MB=1, ME=1 |
| 1 | 01 | 1 | Record name length (1 byte) |
| 2 | 0B | 1 | The length of the URI payload (11 bytes) |
| 3 | 55 ("U") | 1 | Record type: "U" |
| 4 | 02 | 1 | Abbreviation: "https://www." |
| 5 | 61 63 73 2E 63 6F 6D 2E 68 6B | 10 | The URL itself. "acs.com.hk" |

Encode to Ntag = {03 0F D1 01 0B 55 01 61 63 73 2E 63 6F 6D 2E 68 6B FEh}

| Offset | Content | Length | Description |
|--------|--|--------|--|
| 0 | 03 | 1 | TLV header. 03h = NDEF message |
| 1 | 0F | 1 | The length of the NDEF message (15 byte) |
| 2 | D1 01 0B 55 01 61 63 73 2E 63 6F 6D 2E 68 6B | 15 | NDEF Message |
| 17 | FE | 1 | TLV header. FEh = End of record |

Appendix B. Slot Status and Slot Error

Each Bulk-IN Message contains the values of Slot Error and Slot Status registers.

| Offset | Field | Size | Value | Description |
|--------|-----------------|--------|---------|---|
| 0 | bmICCStatus | 2 bits | 0, 1, 2 | 0 - An ICC is present and active (power is on and stable, RST is inactive) 1 - An ICC is present and inactive (not activated or shut down by hardware error) 2 - No ICC is present 3 - RFU |
| 2 | bmRFU | 4 bits | RFU | Length of the Smart Poster data (15 bytes) |
| 6 | bmCommandStatus | 2 bits | 0, 1, 2 | 0 - Processed without error 1 - Failed (error code provided by the error register) 2 - Time Extension is requested 3 - RFU |

Table 16: Slot Status register

| Error Code | Error Name | Possible Causes |
|--------------------------------|----------------------------|---|
| FFh | CMD_ABORTED | Host aborted the current activity |
| FEh | ICC_MUTE | CCID timed out while talking to the ICC |
| FDh | XFR_PARITY_ERROR | Parity error while talking to the ICC |
| FCh | XFR_OVERRUN | Overrun error while talking to the ICC |
| FBh | HW_ERROR | An all inclusive hardware error occurred |
| F8h | BAD_ATR_TS | |
| F7h | BAD_ATR_TCK | |
| F6h | ICC_PROTOCOL_NOT_SUPPORTED | |
| F5h | ICC_CLASS_NOT_SUPPORTED | |
| F4h | PROCEDURE_BYTE_CONFLICT | |
| F3h | DEACTIVATED_PROTOCOL | |
| F2h | BUSY_WITH_AUTO_SEQUENCE | Automatic Sequence Ongoing |
| E0h | CMD_SLOT_BUSY | A second command was sent to a slot which was already processing a command. |
| C0h to 81h | User Defined | |
| 80h and those filling the gaps | RFU | |

| Error Code | Error Name | Possible Causes |
|------------|--|---|
| 7Fh to 01h | Index of not supported / incorrect message parameter | 01h: Bad dwLength 05h: bSlot does not exist 07h: bPowerselect error (not supported) 08h: Bad wLevelParameter 0Ah: FI – DI pair invalid or not supported 0Bh: Invalid TCKTS parameter 0Ch: Guard time not supported 0Dh: T = 0 WI invalid or not supported T = 1 BWI or CWI invalid or not supported 0Eh: Clock stop support requested invalid or not supported 0Fh: IFSC size invalid or not supported 10h: NAD value invalid or not supported |
| 00h | Command not supported | |

Table 17: Slot error register when bmCommandStatus = 1
